

**SOUTH CAROLINA NATIONAL GUARD SUPPLEMENTAL  
RETIREMENT PLAN (SCNG)**

*ACTUARIAL VALUATION REPORT*

*AS OF JULY 1, 2014*

November 20, 2014

Public Employee Benefit Authority  
South Carolina Retirement System  
P.O. Box 11960  
Columbia, SC 29211-1960

**Subject: Actuarial Valuation as of July 1, 2014**

Dear Members of the Board:

This report describes the current actuarial condition of the South Carolina National Guard Supplemental Retirement Plan (SCNG), determines the calculated employer contribution requirement, and analyzes changes in the System's financial condition. In addition, the report provides various summaries of the data. A separate report is issued with regard to valuation results determined in accordance with Governmental Accounting Standards Board (GASB) Statements 67 and 68. Results of this report should not be used for any other purpose without consultation with the undersigned. Valuations are prepared annually as of July 1, the first day of the plan year for SCNG. This report was prepared at the request of the Board of Directors of the South Carolina Public Employee Benefit Authority (Board) and is intended for use by the Public Employee Benefit Authority (PEBA) staff and those designated or approved by the Board.

Under South Carolina State statutes, the Board must certify the employer contribution annually. This amount is determined actuarially, based on the Board's funding policy. The contribution is determined by a given actuarial valuation and becomes effective twelve months after the valuation date. In other words, the contribution amount determined by this July 1, 2014 actuarial valuation will be used by the Board when certifying the employer contribution amount for the year beginning July 1, 2015. If new legislation is enacted between the valuation date and the date the contribution becomes effective, the Board may adjust the calculated amount before certifying them, in order to reflect this new legislation. Such adjustments are based on information supplied by the actuary.

#### **FINANCING OBJECTIVES AND FUNDING POLICY**

The principle objectives in the funding policy that is maintained by the Board include:

- Establish a contribution amount that remains relatively level over time.
- To set an amount so that the measures of the System's funding progress which include the unfunded actuarial accrued liability, funded ratio, and funding period will be maintained or improved.

- To set a contribution amount that will result in the unfunded actuarial accrued liability (UAAL) to be amortized over a period from the current valuation date that does not exceed 30 years (as of the valuation date there are 22-years remaining in the funding period of the experience gains and losses).

The contribution amounts are based on the Board's current funding policy, which is expected to completely amortize the unfunded actuarial accrued liability by June 30, 2036.

### **PROGRESS TOWARD REALIZATION OF FINANCING OBJECTIVES**

The funded ratio (the ratio of the actuarial value of assets to the actuarial accrued liability) is a standard measure of a plan's funded status. In the absence of benefit improvements, it should increase over time, until it reaches at least 100%.

The funded ratio of the System increased from 36.1% to 38.7%. If market value of assets had been used in the calculation instead of actuarial (smoothed) value of assets, the funded ratio for the System would have been 36.3%, compared to 31.5% in the prior year. The increase in the funded ratio on a market value basis is primarily due to favorable investment experience during the last fiscal year. Specifically, the market value of assets earned a 14.3% return on a dollar-weighted basis for the plan year ending June 30, 2014, net of expenses.

### **ASSUMPTIONS AND METHODS**

The actuarial assumptions used to perform this valuation remain unchanged from the prior valuation, including the use of a 7.50% investment return assumption. South Carolina State Code requires that an experience analysis that reviews the economic and demographic assumptions be performed every five years. The next experience study will be conducted using the plan's experience for the five-year period ending June 30, 2015.

It is our opinion that the recommended assumptions are internally consistent and reasonably reflect the anticipated future experience of the System.

The results of the actuarial valuation are dependent on the actuarial assumptions used. Actual results can, and almost certainly will, differ as actual experience deviates from the assumptions. Even seemingly minor changes in the assumptions can materially change the liabilities, calculated contribution rate, and funding periods. The actuarial calculations are intended to provide information for rational decision making.

### **BENEFIT PROVISIONS**

The benefit provisions reflected in this valuation are those which were in effect on July 1, 2014. There have been no changes in plan provisions since the preceding actuarial valuation.

### **DATA**

Member data for retired, active and inactive members was supplied as of July 1, 2014, by the PEBA staff. The staff also supplied asset information as of July 1, 2014. We did not audit this

data, but we did apply a number of tests to the data, and we concluded that it was reasonable and consistent with the prior year's data. GRS is not responsible for the accuracy or completeness of the information provided to us by PEBA.

**CERTIFICATION**

We certify that the information presented herein is accurate and fairly portrays the actuarial position of SCNG as of July 1, 2014.

All of our work conforms with generally accepted actuarial principles and practices and complies with the Actuarial Standards of Practice issued by the Actuarial Standards Board. In our opinion, our calculations also comply with the requirements of South Carolina Code of Laws and, where applicable, the Internal Revenue Code, ERISA, and the Statements of the Governmental Accounting Standards Board.

The undersigned are independent actuaries and consultants. Mr. Newton and Mr. White are Enrolled Actuaries and Members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries. Both are experienced in performing valuations for large public retirement systems.

Sincerely,

**Gabriel, Roeder, Smith & Co.**

Joseph P. Newton, FSA, MAAA, EA  
Senior Consultant

Daniel J. White, FSA, MAAA, EA  
Senior Consultant

<sup>1</sup> The contribution amount determined by the actuarial valuation is effective for the following fiscal year.

**EXECUTIVE SUMMARY (CONTINUED)**

The unfunded actuarial accrued liability decreased by \$1.3 million since the prior year’s valuation to \$38.1 million. Below is a chart with the historical actuarial value of assets and actuarial accrued liability for SCNG.

There is \$1.5 million in deferred investment losses as of the valuation date. Absent favorable investment experience, those losses will be reflected in the actuarial value of assets over the next several years. Therefore, we expect the unfunded actuarial liability for the System and the funded ratio to improve relatively slowly for the next few years as those deferred investment losses become recognized in the actuarial value of assets.

The recommended employer contribution requirement remains relatively unchanged from the prior year by decreasing \$21 thousand dollars to \$4.570 million for FY 2016. Absent legislative changes or significantly favorable investment experience, we expect the contribution requirement to remain relatively constant each future year for the next several years.

---

**SECTION B**  
DISCUSSION

---

## **Discussion**

The results of the July 1, 2014 actuarial valuation of the South Carolina National Guard Supplemental Retirement Plan are presented in this report. The purposes of the valuation report is to depict the current financial condition of the System, determine the annual required contribution, and analyze changes in the System's financial condition. In addition, the report provides various summaries of the members participating in the plan.

This section discusses the determination of the current funding requirements and the System's funded status, as well as changes in financial condition of the retirement system.

All of the actuarial and financial tables referenced by the other sections of this report appear in Section C. Section D provides member data and statistical information. Appendices A and B provide summaries of the principle actuarial assumptions and methods and plan provisions. Finally, Appendix C provides a glossary of technical terms that are used throughout this report.

**Funding Progress**

The funded ratio increased from 36.1% to 38.7% since the prior valuation and has generally trended slightly upward since attaining a relative low 2005 as shown in the graph below. Table 10, Schedule of Funding Progress, in the following section of the report provides additional detail regarding the funding progress of the Retirement System.

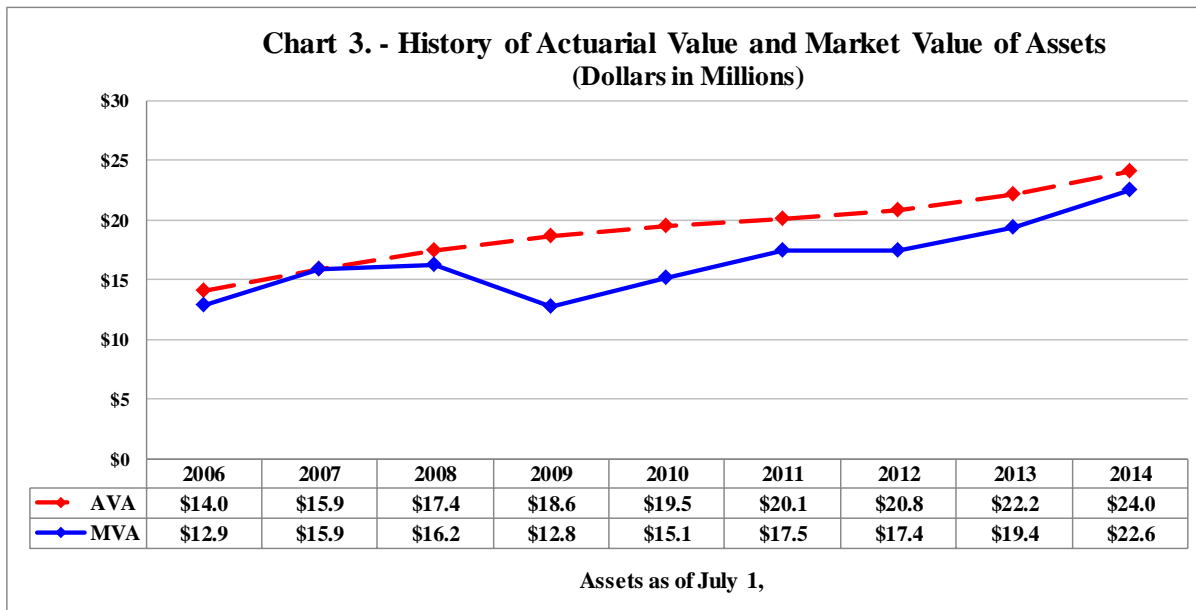

The contribution policy established by the Board is to fully amortize the unfunded actuarial accrued liability (UAAL) over a 30 year period from July 1, 2006. Under this funding policy, there are 22 years remaining in the funding period from the valuation date.

The State appropriation (i.e. employer contribution) is the dollar amount necessary to fund the annual normal cost and systematically amortize the UAAL. There is an amortization cost of \$587,062 to amortize the outstanding balance of \$3,109,431 that was established at July 1, 2006 due to a legislation change that allowed guardsmen who became members of the National Guard after June 30, 1993 to become eligible for membership in the System effective January 1, 2007. The remaining amortization period for this amount as of July 1, 2014 is seven years. The UAAL from other sources of \$34,960,548 is funded over a 30 year period beginning July 1, 2006. The remaining amortization period for this balance as of July 1, 2014 is 22 years. Therefore, the total State appropriation to be made for FY 2016 is \$4,569,973.

### Asset Gains/ (Losses)

The actuarial value of assets (“AVA”) is based on a smoothed market value of assets, using a systematic approach to phase-in actual investment return in excess of (or less than) the expected investment income. This is appropriate because it dampens the short-term volatility inherent in investment markets. The expected investment income is determined using the assumed annual investment return rate and the actuarial value of assets (adjusted for receipts and disbursements during the year). The returns are computed net of administrative and investment expenses. The actuarial value of assets increased from \$22.2 million to \$24.0 million since the prior valuation. Table 8 in the following section of the report provides the development of the actuarial value of assets.

The rate of return on the mean market value of assets in 2014 was 14.3%, which is significantly above the expected annual return. However, because of the offset and recognition of deferred investment losses that occurred in prior years, the actuarial (smoothed) asset value returned only 6.6%. This difference in the estimated return on market value and actuarial value illustrates the smoothing effect of the asset valuation method. The market value of assets is less than the actuarial value of assets, which signifies that the retirement system is in a position of deferred losses.

Tables 6 and 7 in the following section of this report provide asset information that was included in the annual financial statements of the System. Also, Table 9 shows the estimated yield on a market value basis and on the actuarial asset valuation method.

### Actuarial Gains/ (Losses) and the Contribution Requirement

The annual actuarial valuation is a snapshot analysis of the benefit liabilities, assets and funded position of the System as of the first day of the plan year. In any one fiscal year, the experience can be better or worse from that which is assumed or expected. The actuarial assumptions do not necessarily attempt to model what the experience will be for any one given fiscal year, but instead try to model the overall experience on average over many years. The demographic experience for the last year is briefly summarized in the chart below.

The unfunded actuarial accrued liability (UAAL) has decreased from \$39.368 million in 2013 to \$38.071 million in 2014. The table below shows the source of the gains and losses and the impact of those gains and losses on the UAAL.

<b>Reconciliation of UAAL</b>	
(Dollars in thousands)	
• Beginning of Year UAAL	\$39,368
- Interest on UAAL	2,953
- Amortization payment	(4,200)
- Assumption change	0
- Asset experience	368
- Liability experience	(418)
- Legislative changes	<u>0</u>
- Total change	(\$1,297)
• End of Year UAAL	\$38,071

The plan experienced a net \$0.418 million gain in liability due to demographic experience. This net gain is approximately 0.7% of the total actuarial accrued liability.

The following table provides a reconciliation of the change in the recommended contribution from 2013 to 2014. The demographic experience had the largest single impact on the change in the recommended contribution.

<b>Change in Recommended Contribution</b>	
• Prior year valuation	\$4,591
- Expected change	0
- Assumption change	0
- Asset experience	7
- Liability experience	(28)
- Legislative changes	<u>0</u>
- Total change	(\$21)
• Current year valuation	\$4,570

This funding method and contribution policy is designed to result in relatively level contribution requirements from year to year. We expect the contribution requirements to remain stable for the next several years.

### **GASB No. 27 Disclosures**

Accounting requirements for SCNG are provided by the Governmental Accounting Standards Board Statements No. 27 (“GASB 27”) and No. 67 (“GASB 67”).

GASB No. 27, Accounting for Pensions by State and Local Governmental Employers, continues to remain applicable for the financial reporting for the State of South Carolina, the sole participating employer and contributing entity to the System, for the fiscal year ending June 30, 2014. As a result, we continue to provide information as required by GASB No. 25 and 27. GASB 27 requires that plans calculate an Annual Required Contribution (“ARC”), and, if actual contributions received are less than the ARC, this must be disclosed. The ARC is calculated in accordance with certain parameters. In particular, it includes a payment to amortize the UAAL. This amortization payment must be computed using a funding period no greater than thirty (30) years. For this disclosure, PEBA treats the contribution rate established by the Board as the ARC, as long as this produces a funding period that does not exceed 30 years. Note, GASB No. 68 will supersede GASB No. 27 for fiscal years ending after June 15, 2015.

GASB No. 67, Financial Reporting for Pension Plans, superseded GASB No. 25 for the fiscal year ending June 30, 2014. As a result, this is the first year for PEBA to disclose the financial information under this accounting standard. A separate report has been issued with regard to valuation results determined in accordance with GASB No. 67.

### **Actuarial Assumptions and Methods**

In determining costs and liabilities, actuaries use assumptions about the future, such as probabilities of retirement, termination, death and disability, and an annual investment return assumption. The actuarial assumptions and methods used to determine the results of the 2014 actuarial valuation are the same as those used for the prior year's valuation.

Appendix A includes a summary of the actuarial assumptions and methods used in this valuation.

It is our opinion that the assumptions are internally consistent and are reasonable and reflect anticipated future experience of the System.

## **Benefit Provisions**

Appendix B of this report includes a summary of the benefit provisions for SCNG. There have been no changes in the benefit provisions since the prior valuation.

### **Summary of Retirement Provisions**

- All members of the South Carolina National Guard are covered by the Supplemental Retirement Plan.
- The retirement benefit amount is equal to \$50 per month for 20 years' creditable service with an additional \$5 per month for each additional year of service. The total pension is limited to \$100 per month.
- Members with 20 years of military service are eligible for retirement after they have (i) attained age 60, or (ii) completed 30 years of creditable service. Eligible member may commence benefits at age 60.
- Member contributions are not required or permitted.

4. Increase in net assets (Item 2.d.- Item 3.c.)	\$ 3,134	\$ 2,007
5. Value of assets at end of year (Item 1. + Item 4.)	\$ 22,558	\$ 19,424
6. Net external cash flow		
a. Dollar amount	\$ 338	\$ 346
b. Percentage of market value	1.6%	1.9%

**Development of Actuarial Value of Assets**  
 (Dollar amounts expressed in thousands)

		July 1, 2014
		(1)
1. Actuarial value of assets at the prior valuation date	\$	22,208
2. Market value of assets at the prior valuation date	\$	19,424
3. Net external cash flow during the year		
a. Contributions	\$	4,586
b. Disbursements		(4,248)
c. Subtotal	\$	338
4. Expected net investment income at 7.50% earned on		
a. Actuarial value of assets at the prior valuation date	\$	1,666
b. Contributions		344
c. Disbursements		(159)
d. Subtotal	\$	1,851
5. Expected actuarial value of assets, end of year (Item 1. + Item 3.c. + Item 4.d.)	\$	24,397
6. Market value of assets as of the current valuation date	\$	22,558
7. Difference between expected actuarial assets and market value of assets (Item 6. - Item 5.)	\$	(1,839)
8. Excess/(shortfall) recognized (20% of Item 7.)	\$	(368)
9. Actuarial value of plan assets, end of year (Item 5. + Item 8.)	\$	24,029
10. Asset gain (loss) for year (Item 9. - Item 5.)	\$	(368)
11. Asset gain (loss) as % of actual actuarial assets		-1.5%
12. Ratio of AVA to MVA		106.5%

**Estimation of Yields**  
 (Dollar amounts expressed in thousands)

	Year Ending	
	July 1, 2014 (1)	July 1, 2013 (2)
1. Market value yield		
a. Beginning of year market assets	\$ 19,424	\$ 17,417
b. Contributions to fund during the year	4,586	4,539
c. Disbursements	(4,248)	(4,193)
d. Investment income (net of investment and administrative expenses)	2,796	1,661
e. End of year market assets	\$ 22,558	\$ 19,424
f. Estimated dollar weighted market value yield	14.3%	9.4%
2. Actuarial value yield		
a. Beginning of year actuarial assets	\$ 22,208	\$ 20,814
b. Contributions to fund during the year	4,586	4,539
c. Disbursements	(4,248)	(4,193)
d. Investment income (net of investment and administrative expenses)	1,483	1,048
e. End of year actuarial assets	\$ 24,029	\$ 22,208
f. Estimated actuarial value yield	6.6%	5.0%

2014	24,029	62,100	38,071	38.7%	N/A	N/A

\*As of April 30, 2000.

**Notes to Required Supplementary Information**  
**(as required by GASB #27)**

The information presented in the required supplementary schedules was determined as part of the actuarial valuation at the dates indicated. Additional information as of the latest actuarial valuation follows:

Valuation date	July 1, 2014
Actuarial cost method	Entry Age Normal
Amortization method	Level dollar
Amortization period for GASB 27 ARC	18-year closed period <sup>1</sup>
Asset valuation method	5-year smoothed market
Actuarial assumptions:	
Investment rate of return <sup>2</sup>	7.50%
Projected salary increases	None
Inflation	2.75%
Cost-of-living adjustments	0.00%

<sup>1</sup> The blended amortization period as of the valuation date.

<sup>2</sup> Includes inflation at 2.75%.

## **APPENDIX A**

### ACTUARIAL ASSUMPTIONS AND METHODS

---

### Summary of Actuarial Assumptions and Methods

The following presents a summary of the actuarial assumptions and methods used in the valuation of the South Carolina National Guard Supplemental Retirement Plan.

**Investment Rate of Return**

Assumed annual rate of 7.50% net of investment and administrative expenses composed of a 2.75% inflation component and a 4.75% real rate of return, net of investment and administration expenses.

**Rates of Annual Salary Increase**

No increases in salary are assumed. The benefit is not related to pay.

**Active Member Decrement Rates**

- a. Assumed rates of service retirement are shown in the following table. Members who retire prior to age 60 are assumed to defer retirement benefits until age 60.

Age Based Retirement Rates		
Age	Rate with 20 or more years of service	Rate with 30 or more years of service
39 & Under	10.00%	100.00%
40-49	10.00%	100.00%
50-59	10.00%	100.00%
60 & older	100.00%	100.00%

- b. An abbreviated table with the assumed rates of disability and mortality while employed is shown below. There is no active employment withdrawal assumption.

Age	Disability Rates		Pre-Retirement Mortality	
	Males	Females	Males	Females
25	0.0854%	0.0854%	0.0338%	0.0186%
30	0.1100%	0.1100%	0.0653%	0.0264%
35	0.1474%	0.1474%	0.0978%	0.0467%
40	0.2201%	0.2201%	0.1234%	0.0790%
45	0.3595%	0.3595%	0.1614%	0.1248%
50	0.6059%	0.6059%	0.2171%	0.1767%
55	1.0089%	1.0089%	0.3776%	0.2516%
60	1.6269%	1.6269%	0.7443%	0.4454%
Multiplier			90.0%	90.0%

Note: The multiplier has been applied to the decrement in the illustrative table.

**Post Retirement Mortality**

Retirees and beneficiaries – This valuation assumes fully generational mortality. The base mortality table is 115% of the RP-2000 Mortality Table with Blue Collar Adjustment. Future mortality improvements are assumed each year using Scale AA. The following are sample rates:

<b>Annuitant Mortality Rates Before Projection (Multiplier Applied)</b>		
<b>Age</b>	<b>Males</b>	<b>Females</b>
50	0.2774%	0.2257%
55	0.4825%	0.3214%
60	0.9511%	0.5691%
65	1.7870%	1.1958%
70	3.0772%	2.1429%
75	4.9601%	3.5521%
80	8.1129%	5.6296%
85	13.2339%	9.5565%
90	20.9021%	15.7189%
<b>Multiplier</b>	115%	115%

The following table provides the life expectancy for individuals retiring in future years based on the assumption with full generational projection:

<b>Life Expectancy for an Age 65 Retiree in Years</b>				
<b>Gender</b>	<b>Year of Retirement</b>			
	<b>2015</b>	<b>2020</b>	<b>2025</b>	<b>2030</b>
Male	17.8	18.2	18.6	19.0
Female	19.7	19.9	20.1	20.4

### ***Asset Valuation Method***

The actuarial value of assets is based on the market value of assets with five-year smoothing applied. This is accomplished by recognizing each year 20% of the difference between the market value of assets and the expected actuarial value of assets, based upon the assumed valuation rate of return.

Expected earnings are determined using the assumed investment rate of return and the beginning of year actuarial value of assets (adjusted for receipts and disbursements during the year). The returns are computed net of administrative and investment expenses.

### ***Actuarial Cost Method***

The Entry Age Normal actuarial cost method allocates the System's actuarial present value of future benefits to various periods based upon service. The portion of the present value of future benefits allocated to years of service prior to the valuation date is the actuarial accrued liability, and the portion allocated to years following the valuation date is the present value of future normal costs. The normal cost is determined for each active member as the level dollar amount necessary to fully fund the expected benefits to be earned over the career of each individual active member. The normal cost is partially funded with active member contributions with the remainder funded by employer contributions.

An unfunded accrued liability exists in the amount equal to the excess of accrued liability over valuation assets. The amortization period of the System is the number of years required to fully amortize the unfunded accrued liability with the expected amount of employer contributions in excess of the employers' portion of the normal cost.

***Future Cost-of-Living Increases***

No increases are assumed.

***Payroll Growth Rate***

None assumed.

***Other Assumptions***

1. There is not a marriage assumption.
2. Decrement timing: Decrements of all types are assumed to occur mid-year.
2. Eligibility testing: Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.

***Participant Data***

Participant data was supplied in electronic text files. There were separate files for (i) active, and (ii) members and beneficiaries receiving benefits.

The data for active members included birth date, gender, total military service and total South Carolina National Guard service. For retired members and beneficiaries, the data included date of birth, gender, spouse's date of birth (where applicable), amount of monthly benefit, date of retirement, and form of payment code.

Assumptions were made to correct for missing, bad, or inconsistent data. These had no material impact on the results presented.

---

## **APPENDIX B**

### **BENEFIT PROVISIONS**

---

---

**SUMMARY OF BENEFIT PROVISIONS FOR  
SOUTH CAROLINA NATIONAL GUARD SUPPLEMENTAL RETIREMENT PLAN  
(SCNG)**

**Effective Date:** July 1, 1975

**Administration:** The South Carolina Public Employee Benefit Authority, is responsible for the general administrative operations and day to day management of the Plan.

**Eligibility:** All members of the South Carolina National Guard who became members on or before June 30, 1993 are covered by the System. Effective January 1, 2007, eligibility for membership has been extended to those guardsmen who became members of the South Carolina National Guard after June 30, 1993.

**Employee Contributions:** Contributions from members are not permitted.

**Service Retirement:**

- a. **Eligibility:** Members who are honorably discharged after attaining age 60 with at least 20 years of creditable military service, which include at least 15 years, 10 of which immediately preceding retirement, with the National Guard of South Carolina.
- b. **Monthly Benefit:** \$50 per month for 20 years of creditable service with an additional \$5 per month for each additional year of service, subject to a maximum monthly benefit of \$100 per month.
- c. **Payment Form:** Life annuity.

**Disability Retirement:** None

**Deferred Termination Benefit:**

- a. **Eligibility:** Members who are honorably discharged prior to attaining age 60 with at least 20 years of creditable military service, which include at least 15 years, 10 of which immediately preceding retirement, with the National Guard of South Carolina.
- b. **Monthly Benefit:** Upon attaining age 60, the member will receive \$50 per month for 20 years of creditable service with an additional \$5 per month for each additional year of service, subject to a maximum monthly benefit of \$100 per month.
- c. **Payment Form:** Life annuity.

**Active Member Death Benefit:** None.

**Postretirement Benefit Increases:** None.

---

## **APPENDIX C**

### **GLOSSARY**

---

## GLOSSARY

**Actuarial Accrued Liability (AAL):** That portion, as determined by a particular Actuarial Cost Method, of the Actuarial Present Value of Future Plan Benefits which is not provided for by future Normal Costs. It is equal to the Actuarial Present Value of Future Plan Benefits minus the actuarial present value of future Normal Costs.

**Actuarial Assumptions:** Assumptions as to future experience under the Fund. These include assumptions about the occurrence of future events affecting costs or liabilities, such as:

- mortality, withdrawal, disablement, and retirement;
- future increases in salary;
- future rates of investment earnings and future investment and administrative expenses;
- characteristics of members not specified in the data, such as marital status;
- characteristics of future members;
- future elections made by members; and
- other relevant items.

**Actuarial Cost Method or Funding Method:** A procedure for allocating the Actuarial Present Value of Future Benefits to various time periods; a method used to determine the Normal Cost and the Actuarial Accrued Liability. These items are used to determine the ADC.

**Actuarial Gain or Actuarial Loss:** A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two Actuarial Valuation dates. Through the actuarial assumptions, rates of decrements, rates of salary increases, and rates of fund earnings have been forecasted. To the extent that actual experience differs from that assumed, Actuarial Accrued Liabilities emerge which may be the same as forecasted, or may be larger or smaller than projected. Actuarial gains are due to favorable experience, e.g., the Fund's assets earn more than projected, salaries do not increase as fast as assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, actuarial losses are the result of unfavorable experience, i.e., actual results that produce actuarial liabilities which are larger than projected. Actuarial gains will shorten the time required for funding of the actuarial balance sheet deficiency while actuarial losses will lengthen the funding period.

**Actuarially Equivalent:** Of equal actuarial present value, determined as of a given date and based on a given set of Actuarial Assumptions.

**Actuarial Present Value (APV):** The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions. For purposes of this standard, each such amount or series of amounts is:

- a. adjusted for the probable financial effect of certain intervening events (such as changes in compensation levels, marital status, etc.)

- b. multiplied by the probability of the occurrence of an event (such as survival, death, disability, termination of employment, etc.) on which the payment is conditioned, and
- c. discounted according to an assumed rate (or rates) of return to reflect the time value of money.

**Actuarial Present Value of Future Plan Benefits:** The Actuarial Present Value of those benefit amounts which are expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age and past and anticipated future compensation and service credits. The Actuarial Present Value of Future Plan Benefits includes the liabilities for active members, retired members, beneficiaries receiving benefits, and inactive, nonretired members either entitled to a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due.

**Actuarial Valuation:** The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial valuation for a governmental retirement system typically also includes calculations that provide the financial information of the plan, such as the funded ratio, unfunded actuarial accrued liability and the ADC.

**Actuarial Value of Assets or Valuation Assets:** The value of the Fund's assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets, but commonly actuaries use a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the ADC.

**Actuarially Determined:** Values which have been determined utilizing the principles of actuarial science. An actuarially determined value is derived by application of the appropriate actuarial assumptions to specified values determined by provisions of the law.

**Actuarially Determined Contribution (ADC):** The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation. The ADC consists of the Employer Normal Cost and the Amortization Payment.

**Amortization Method:** A method for determining the Amortization Payment. The most common methods used are level dollar and level percentage of payroll. Under the Level Dollar method, the Amortization Payment is one of a stream of payments, all equal, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the Amortization payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the stream of payments increases at the assumed rate at which total covered payroll of all active members will increase.

**Amortization Payment:** That portion of the pension plan contribution or ADC which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.

**Closed Amortization Period:** A specific number of years that is counted down by one each year, and therefore declines to zero with the passage of time. For example if the amortization period is initially set at 30 years, it is 29 years at the end of one year, 28 years at the end of two years, etc. See Funding Period and Open Amortization Period.

**Decrements:** Those causes/events due to which a member's status (active-inactive-retiree-beneficiary) changes, that is: death, retirement, disability, or termination.

**Defined Benefit Plan:** A retirement plan that is not a Defined Contribution Plan. Typically a defined benefit plan is one in which benefits are defined by a formula applied to the member's compensation and/or years of service.

**Defined Contribution Plan:** A retirement plan, such as a 401(k) plan, a 403(b) plan, or a 457 plan, in which the contributions to the plan are assigned to an account for each member, and the plan's earnings are allocated to each account, and each member's benefits are a direct function of the account balance.

**Employer Normal Cost:** The portion of the Normal Cost to be paid by the employers. This is equal to the Normal Cost less expected member contributions.

**Experience Study:** A periodic review and analysis of the actual experience of the Fund which may lead to a revision of one or more actuarial assumptions. Actual rates of decrement and salary increases are compared to the actuarially assumed values and modified as deemed appropriate by the Actuary.

**Funded Ratio:** The ratio of the actuarial value of assets (AVA) to the actuarial accrued liability (AAL). Plans sometimes calculate a market funded ratio, using the market value of assets (MVA), rather than the AVA, although GASB 25 reporting requires the use of the AVA.

**Funding Period or Amortization Period:** The term "Funding Period" is used two ways. In the first sense, it is the period used in calculating the Amortization Payment as a component of the ADC. This funding period is chosen by the Board of Trustees. In the second sense, it is a calculated item: the number of years in the future that will theoretically be required to amortize (i.e., pay off or eliminate) the Unfunded Actuarial Accrued Liability, based on the statutory employer contribution rate, and assuming no future actuarial gains or losses.

**GASB:** Governmental Accounting Standards Board.

**GASB 25 and GASB 27:** Governmental Accounting Standards Board Statements No. 25 and No. 27. These are the governmental accounting standards that set the accounting rules for public retirement systems and the employers that sponsor or contribute to them. Statement No. 27 sets the accounting rules for the employers that sponsor or contribute to public retirement systems, while Statement No. 25 sets the rules for the systems themselves. GASB No. 25 was superseded by GASB No. 67 beginning with the fiscal year ending June 30, 2014. GASB No. 27 will be superseded by GASB No. 68 beginning with the fiscal year ending June 30, 2015.

**Normal Cost:** That portion of the Actuarial Present Value of pension plan benefits and expenses which is allocated to a valuation year by the Actuarial Cost Method. Any payment in respect of an Unfunded Actuarial Accrued Liability is not part of Normal Cost (see Amortization Payment). For pension plan benefits which are provided in part by employee contributions, Normal Cost refers to the total of employee contributions and employer Normal Cost unless otherwise specifically stated. Under the entry age normal cost method, the Normal Cost is intended to be the level cost (when expressed as a percentage of pay) needed to fund the benefits of a member from hire until ultimate termination, death, disability or retirement.

**Open Amortization Period:** An open amortization period is one which is used to determine the Amortization Payment but which does not change over time. In other words, if the initial period is set as 30 years, the same 30-year period is used in determining the Amortization Period each year. In theory, if an Open Amortization Period is used to amortize the Unfunded Actuarial Accrued Liability, the UAAL will never completely disappear, but will become smaller each year, either as a dollar amount or in relation to covered payroll.

**Unfunded Actuarial Accrued Liability:** The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets. This value may be negative in which case it may be expressed as a negative Unfunded Actuarial Accrued Liability, also called the Funding Surplus.

**Valuation Date or Actuarial Valuation Date:** The date as of which the value of assets is determined and as of which the Actuarial Present Value of Future Plan Benefits is determined. The expected benefits to be paid in the future are discounted to this date.
