South Carolina Police Officers Retirement System (PORS)<br>Annual Actuarial Valuation as of July 1, 2009

May 10, 2010

State Budget and Control Board
South Carolina Retirement System
P.O. Box 11960

Columbia, SC 29211-1960

## Members of the Board:

The laws governing the operation of the South Carolina Police Officers Retirement System (PORS) provide that actuarial valuations of the assets and liabilities of the System shall be made annually. We have conducted the annual actuarial valuation of the Police Officers Retirement System as of July 1, 2009 and the results of the valuation are contained in the following report.

A funding objective of the System is that contribution rates as a percentage of payroll will remain relatively level over time. As these contribution rates are set by the Board, the valuation is used to determine the sufficiency of the contributions to maintain or improve the measures of the System's funding progress (i.e. funded ratio, funding period) and provide for the complete funding of all actuarial liabilities within 30 years.

In performing the valuation, we relied on data supplied by the System and performed limited tests on the data for consistency and reasonableness. All benefits provided under the South Carolina Code of Laws are included in the valuation with the exception of the Group Life Insurance benefits which are covered under a separate actuarial valuation and the Accidental Death Benefits. The normal cost and accrued liability of the System are developed using the entry age normal cost method. Under this method, the normal cost is level percent of payroll necessary to fully fund the expected benefits to be earned over the career of each individual active member. The normal cost is partially funded with active member contributions with the remainder funded by employer contributions.

In determining the System's liabilities, future events, such as investment returns, salary increases, deaths, retirements, etc., are anticipated based upon the set of actuarial assumptions as approved by the Board. The assets of the system for valuation purposes are developed using an asset smoothing technique which spreads the recognition of the unexpected portion market related gains and losses over a period of years with the goal of dampening the impact of market volatility upon valuation results.

An unfunded accrued liability exists in the amount equal to the excess of accrued liability over valuation assets. The amortization period of the System is the number of years required to fully amortize the unfunded accrued liability with the expected amount of employer contributions in excess of the employers' portion of the normal cost. The System's current assets together with the scheduled contributions are expected to fully fund the System's liabilities within 30 years. In our opinion, PORS continues to operate on an actuarially sound basis.

Future actuarial results may differ significantly from the current results presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; and changes in plan provisions or applicable law. Since the potential impact of such factors is outside the scope of a normal annual actuarial valuation, an analysis of the range of results is not presented herein.

This is to certify that the undersigned are members of the American Academy of Actuaries and have experience in performing valuations for public retirement systems, that the valuation was prepared in accordance with principles of practice prescribed by the Actuarial Standards Board, and that the actuarial calculations were performed by qualified actuaries in accordance with accepted actuarial procedures, based on the current provisions of the retirement system and on actuarial assumptions and methods that are internally consistent and reasonably based on the actual experience of the System.

Respectfully submitted,

John J. Garrett, ASA, FCA, MAAA
Principal and Consulting Actuary

Edward A. Macdonald, ASA, FCA, MAAA
President

*Pending Board approval of a $0.48 \%$ contribution rate increase effective 7/1/2012 to maintain a 30 year period.

## Section I: Board Summary

## Summary of Key Findings

The employer contribution rate for the System beginning July 1, 2010 is scheduled to increase by $0.48 \%$ to $11.53 \%$. This rate includes the $0.20 \%$ contribution for the Group Life Fund Insurance benefits and the $0.20 \%$ contribution for the Accidental Death benefits. The $11.13 \%$ employer contribution rate (net of the insurance benefits) is used to pay the employer's portion of the normal cost and to amortize the unfunded actuarial liability (UAL).

The actuarially determined employer normal cost contribution rate decreased from $7.11 \%$ to $7.04 \%$ of covered payroll for FY 2011. Therefore, the net contribution towards the UAL increases by $0.55 \%$ (due to both the scheduled $0.48 \%$ increase and the $0.07 \%$ decline in the normal cost rate) from $3.54 \%$ to $4.09 \%$. The unfunded actuarial liability increased from $\$ 956$ million to $\$ 1,082$ million. The resulting amortization period increased to 35 years. In order to satisfy the required 30 year amortization period as of July 1, 2009, the employer contribution rate effective the fiscal year beginning July 1, 2012 would need to increase by $0.48 \%$ of covered payroll to $12.01 \%$ (which includes the $0.40 \%$ for insurance benefits). We note the following key findings:

- The UAL grew by $\$ 76.5$ million due to interest and decreased by $\$ 51.0$ million due to the amortization payment. This results in a 1 year decrease to the amortization period.
- The System experienced an actuarial loss on plan assets of $\$ 123.4$ million as a result of investment return on the actuarial value of assets being less than the assumed rate. The loss increased the amortization period by 7.2 years. Table III-3 provides the calculation of the investment loss for this year.
- The System experienced a net actuarial gain of $\$ 22.7$ million on plan liabilities due to noninvestment related experience. Table IV-4 provides the reconciliation of the UAAL which is summarized as follows:

1. The System provides post-retirement Cost of Living Adjustments based upon the annual change in the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) up to $2.00 \%$. The benefits paid to eligible retirees and beneficiaries are expected to increase at a rate of $2.00 \%$ annually. The CPI-W for the year ended December 31, 2008 declined from the prior year and resulted in no increase to the benefits amounts. This resulted in a $\$ 48.3$ million decrease in plan liabilities and reduced the amortization period by 2.4 years.

## Section I: Board Summary

2. The System experienced a $\$ 27.7$ million gain due to salary experience which reduced the funding period by 1.3 years.
3. Partially offsetting these gains were losses primarily attributable to the System turnover experience. The losses increased plan liabilities by $\$ 53.3$ million and increased the funding period by 2.0 years.
4. Other factors, primarily the less than expected increase in active member payroll, resulted in a 0.5 year increase in the amortization period. These factors had a minor direct impact on the UAL.

Section II of the report provides summarized information on the membership data used in the valuation. Section III of the report covers the System's assets and Section IV of the report covers the System's liabilities. The results of the valuation are provided in Section $V$ of the report and the accounting information is in Section VI. The appendices provide additional information on: A) the System members; B) the actuarial assumptions and methods; and C) the summary of plan provisions. It should be noted that all information contained in this report for periods prior to July 1, 2009 were produced by a prior actuarial consulting firm.

## Section II: Membership Data

Data regarding the membership of the System for use in the valuation were furnished by the Retirement Systems. The following table summarizes the membership data as of July 1, 2009 and is compared with that reported for the prior year.

| Table II-1: Summary of Membership Data |  |  |
| :--- | ---: | ---: |
| Active Members | July 1, 2009 | July 1, 2008 |
| Total Number of Active Members | 26,598 | 26,427 |
| Total Annual Compensation | $\$ 1,084,154$ | $\$ 1,060,747$ |
|  |  |  |
| Number of Rehired Retired Members | 1,915 | 1,716 |
| Total Annual Compensation | $\$ 66,341$ | $\$ 64,735$ |
|  |  |  |
| Retirees and Beneficiaries | 9,095 | 8,539 |
| Number of Service Retirements | $\$ 172,767$ | $\$ 160,727$ |
| Total Annual Benefit Payments |  |  |
|  | 1,775 | 1,694 |
| Number of Disability Retirements | $\$ 32,542$ | $\$ 30,786$ |
| Total Annual Benefit Payments |  |  |
| Number of Beneficiaries | 1,080 | 1,053 |
| Total Annual Benefit Payments | $\$ 12,189$ | $\$ 11,928$ |
| Inactive Members |  |  |
| Number of Non-vested Inactive Members | 9,935 | 9,647 |
| Number of Vested Inactive Members | 1,897 | 1,911 |
| All dollar amounts are in thousands. |  |  |

## Section III: System Assets

The following tables provide information on the System's assets and cash flow.

Table III-1: Market Value Reconciliation and Cash Flow

|  | July 1, 2009 | July 1, 2008 |
| :---: | :---: | :---: |
| 1. Beginning of Year Market Value of Assets | \$3,138,551 | \$3,245,480 |
| Income |  |  |
| 2. Employer Contributions | \$119,922 | \$110,050 |
| 3. Member Contributions | 77,014 | 75,666 |
| Total Contributions | \$196,936 | \$185,716 |
| 4. Investment Income (net of expenses) | (\$629,387) | $(\$ 86,357)$ |
| Disbursements |  |  |
| 5. Benefit Payments | \$224,144 | \$208,296 |
| 6. Transfers | (\$1,625) | $(\$ 2,008)$ |
| 7. Net Change in Market Value of Assets $(2+3+4-5-$ 6) | (\$654,970) | (\$106,929) |
| 8. End of Year Market Value of Assets (1+7) | \$2,483,581 | \$3,138,551 |
| Approximate Rate of Return on Market Value of Assets | (20.1\%) | (2.7\%) |
| Net Cash Flow (Contributions less Disbursements) | $(\$ 25,583)$ | (\$20,572) |
| Cash Flow as a \% of Average Market Value | (0.9\%) | (0.6\%) |
| All dollar amounts are in thousands. |  |  |

A mature System such as PORS is expected to exhibit negative net cash flow as the number of members receiving benefit payments becomes a larger portion of total membership. In a year with a significant increase or decrease in the market value of assets, the cash flow as a percent of market value will likewise fluctuate.

## Section III: System Assets

## Development of Actuarial Value of Assets

The Actuarial Value of Assets represents a "smoothed" value developed with the purpose to dampen the impact of market volatility on the assets used in determining valuation results. The Actuarial Value of Assets has been calculated by spreading the recognition of excess investment income over ten years (five years for income prior to July 1, 2007). The amount of excess investment income in each year is the difference between expected and actual market value investment income. Table III-2 provides the calculation of the amount of the current year market value excess investment income to be phased-in as well as the total amount of deferred excess investment income from the current and prior years calculated in the development of the actuarial value of assets.

## Table III-2: Development of Actuarial Value of Assets

## Calculation of Current Year Excess Investment Income

1. Market Value of Assets at Beginning of Year
2. Total Net Cash Flow During the Year (Table III-1 Net Cash Flow)
3. Market Value of Assets at End of Year
4. Actual Investment Income During the Year Based on Market Value
5. Expected Earnings for the Year
a. Market Value of Assets, Beginning of Year (1 x 8.00\%)
b. Net Cash Flow ( $2 \times 8.00 \% \times .5$ )
c. Total $(a+b)$
6. Current Year Excess Investment Income (4-5c)

## Calculation of Total Amount of Deferred Excess Investment Income

7. Amounts of Excess Investment Income from Current and Prior Years

| Valuation Year | Excess <br> Investment Income | Percent <br> Deferred | Amount <br> Deferred |  |
| :---: | :---: | :---: | :---: | :---: |
| 2009 | $(\$ 879,448)$ |  | $90 \%$ |  |
| 2008 | $(320,908)$ | $80 \%$ | $(2591,503)$ |  |
| 2007 | 156,569 | $40 \%$ | $(256,726)$ |  |
| 2006 | $(65,188)$ | $20 \%$ | 62,628 |  |
|  |  |  | $(13,038)$ |  |

Total Amount of Deferred Excess Investment Income
$(\$ 998,639)$
8. Actuarial Value of Assets as of July 1, 2009 (3-7)

Approximate Rate of Return on Actuarial Value of Assets
\$3,482,220 4.3\%

All dollar amounts are in thousands.

## Section III: System Assets

The actuarial valuation assumes the investment income on the assets of the System is $8.00 \%$ annually. This assumption is based upon the reasonable long-term expected return on the assets. In each year, the System will experience actuarial gains and losses due to the actual investment return of the assets.

## Table III-3: Calculation of Actuarial Investment Gain/(Loss)

1. Actuarial Value of Assets at Beginning of Year
\$3,363,136
2. Total Net Cash Flow (Table III-2(2))
3. Expected Return on Actuarial Value of Assets ( $1 \times 8.00 \%+2 \times 8.00 \% \times .5$ )
4. Expected Actuarial Value of Assets at End of Year $(1+2+3)$
5. Actual Actuarial Value of Assets at End of Year (Table III-2(8))
6. Actuarial Gain/(Loss) Due to Investment Experience (5-4)

All dollar amounts are in thousands.

As recommended in the latest experience study (covering the 5 year period ending June 30, 2007), the Board moved to adopt an increase to the asset smoothing period from 5 to 10 years for gains and losses experienced after June 30, 2007. The change to a longer asset smoothing period had the purpose of adjusting for the additional expected volatility of returns due to less restrictive asset allocation and the expansion of allowable asset classes in which the system can now invest. Maintaining a restriction on the asset smoothing method, such as the corridor, is contrary to the implementation of an extended smoothing period.

## Section IV: System Liabilities

The present value of benefits is the value as of the valuation date of all future benefits expected to be paid to current members of the System. Table IV-1 presents the present value of benefits by category as of the valuation date.

| Table IV-1: Present Value of Benefits |  |
| :--- | ---: |
|  |  |
| Active Members |  |
| Service Retirement | $\$ 2,573,010$ |
| Disability Retirement | 252,380 |
| Survivors' Benefits | 49,094 |
| Termination | $\underline{323,153}$ |
| Total for Active Members | $\$ 3,197,637$ |
| Inactive Members | $\$ 19,984$ |
| $\quad$ Non-Vested (Refund only) | $\mathbf{8 6 , 7 6 5}$ |
| $\quad$ Vested | $\$ 106,749$ |
| Total for Inactive Members | $\$ 1,867,145$ |
| Retirees and Beneficiaries | 358,143 |
| $\quad$ Service Retirements | $\underline{123,397}$ |
| $\quad$ Disability Retirements | $\$ 2,348,685$ |
| $\quad$ Beneficiaries | $\$ 5,653,071$ |
| Total for Retirees and Beneficiaries |  |
| Total Present Value of Benefits |  |
| All dollar amounts are in thousands. |  |

An actuarial cost method allocates each individual's present value of benefits to past and future years of service. The actuarial accrued liability includes the portion of the active member present value of benefits allocated to past service as well as the entire present value of benefits for retirees, beneficiaries and inactive members. Table IV-2 presents the actuarial accrued liability as of the valuation date.

| Table IV-2: Actuarial Accrued Liability |  |
| :--- | ---: |
| Active Members |  |
| Service Retirement | $\$ 1,900,523$ |
| Disability Retirement | 107,676 |
| Survivors' Benefits | 32,741 |
| Termination | $\underline{67,737}$ |
| Total for Active Members | $\$ 2,108,677$ |
| Total for Inactive Members (Table IV-1) | 106,749 |
| Total for Retirees and Beneficiaries (Table IV-1) | $\underline{\$ 2,348,685}$ |
| Total Actuarial Accrued Liability | $\$ 4,564,111$ |
| All dollar amounts are in thousands. |  |

The funded ratio of the System is the ratio of the actuarial value of assets (Table III-2) divided by the actuarial accrued liability (Table IV-2) as of the valuation date. As of July 1, 2009, the funded ratio of the System is $76.3 \%$ as compared to the ratio in prior valuation of $77.9 \%$. The decline in the funded ratio is primarily attributable to the investment experience during the year. The ratio is a commonly used measure of the funding progress of a System and can be useful in reviewing the historical trend of a System's funding progress. Such a review should also consider the impact to this measure over the historical period due to changes to plan benefits, changes to the actuarial assumptions and methods, and significant impact that investment experience can have on the ratio over short-term periods. We caution that no single "point in time" measure can provide a universal basis for comparing one System to another.

Under the valuation funding method, an unfunded actuarial accrued liability (UAAL) exists to the extent that the actuarial accrued liability exceeds the actuarial value of assets as presented in Section III. The calculation of the UAAL as of the valuation date is shown in Table IV-3. Table IV-3: Unfunded Actuarial Accrued Liability (UAAL)

1. Total Actuarial Accrued Liability (Table IV-2)
\$4,564,111
2. Actuarial Value of Assets (Table III-2(8))
\$3,482,220
Unfunded Actuarial Accrued Liability (UAAL) (1-2)
\$1,081,891

All dollar amounts are in thousands.

## Section IV: System Liabilities

Although the terminology used to describe the excess of the System's actuarial accrued liability over the System's actuarial value of assets is call the "unfunded" actuarial accrued liability, there is a dedicated source of funding for this liability. The scheduled employer and employee contributions are expected to completely fund the System's liabilities (pay off the UAAL) within 30 years.

The calculation of the System's actuarial assets and liabilities require the use of several assumptions concerning the future experience of the System and its members. In each annual valuation, the latest year of actual experience is compared to that expected by the prior valuation. The differences are actuarial gains and losses which decrease or increase the UAAL. Table IV-4 provides for the reconciliation of the UAAL and shows the primary sources of this year's gains and losses due to actuarial experience.

## Table IV-4: Reconciliation of the UAAL

1. Beginning of Year UAAL
\$955,819
2. Expected Amortization Payment $(49,053)$
3. Expected Interest $(1 \times 8.00 \%+2 \times 8.00 \% \times .5)$ 74,503
4. Expected End of Year UAAL $(1+2+3)$ \$981,269
5. Actuarial Experience (Gain)/Loss

Change due to Transition
\$12,716
COLA
Salary Experience
$(27,687)$
Turnover and Other 40,559
Asset Experience
Total Actuarial (Gain)/Loss
123,361
6. End of Year UAAL $(4+5)$
\$100,622
\$1,081,891

All dollar amounts are in thousands.

## Section V: Actuarial Valuation Results

The employer contribution rate established by the Board funds the employers' portion of the normal cost and amortizes the UAAL over a period not to exceed 30 years. The primary result of the actuarial valuation is to test the sufficiency of the employer contribution rate to meet these funding requirements.

Section IV of this report presented the System's actuarial accrued liability as the portion of the present value of benefits allocated to past years of service. The portion of the active members' present value of benefits allocated to future years of service is funded through annual normal cost contributions comprised of both active member and employer contributions. The System's annual normal cost rate is calculated as a percent of covered payroll which is expected to remain level over all future years of service. The portion of the total normal cost rate in excess of the active member contribution rate is the employer normal cost rate. The normal cost rate developed as of the valuation date is presented in Table V-1.

| Table V-1: Normal Cost Rate |  |
| :--- | ---: |
|  |  |
| Normal Cost Rate of Active Members by Expected Benefit Type |  |
| Service Retirement | $8.59 \%$ |
| Disability Retirement | $1.69 \%$ |
| Survivors' Benefits | $0.20 \%$ |
| Termination | $\underline{3.06 \%}$ |
| Total Normal Cost Rate for Active Members | $13.54 \%$ |
| Less: Active Member Contribution Rate | $\underline{6.50 \%}$ |
| Employer's Normal Cost Rate |  |

The established employer contribution rate beginning July 1, 2010 is $11.53 \%$ of active member payroll and includes the $0.20 \%$ contribution rate required for funding the Group Life Insurance (GLI) benefit program and the $0.20 \%$ contribution rate for funding the Accidental Death benefit program. The net $11.13 \%$ employer contribution rate is available to fund the annual normal cost and amortize the UAAL as a level percent of payroll. In addition, the amortization payment includes contributions made on the payroll of retirees reemployed in positions covered by the System. The rate of active member payroll which is available to amortize the UAAL and the rehired retiree rate is shown in Table V-2.

## Section V: Actuarial Valuation Results

| Table V-2: UAAL Amortization Rate |  |
| :--- | :---: |
| Calculation of Amortization Rate on Active Member |  |
| Payroll | \% of Payroll |
|  | $11.53 \%$ |
| Statutory Employer Contribution Rate | $0.20 \%$ |
| Less: Group Life Insurance Benefit Rate | $0.20 \%$ |
| Less: Accidental Death Benefit Rate | $\underline{7.04 \%}$ |
| Less: Employer Normal Cost Rate (Table V-1) | $4.09 \%$ |
| Employer Contribution Rate Available to Amortize UAAL | $\%$ of Payroll |
|  | $17.63 \%$ |
| Additional Source of Amortization Funding |  |
| Rehired Retiree participants |  |

The System's amortization period or funding period is the calculated number of years necessary to fully amortize the UAAL with the available contribution amounts from all sources. The calculation assumes that the payroll of all sources, active members and rehired retirees, will increase at an annual rate of $4.0 \%$ each future year. The assumed rate of payroll growth reflects the System's assumption for long-term wage inflation and does not anticipate future increases in number of participants. Based upon this method, as of July 1, 2009 the calculated amortization period required to fully amortize UAAL (Table IV-3) with the expected amortization funding from all sources is 35.0 years.

## Section V: Actuarial Valuation Results

If all actuarial assumptions were met exactly, the amortization period would be expected to have decreased by 1 year from the period calculated in the prior valuation. The actual experience of the latest valuation has increased the amortization period by 6.0 years. The sources and magnitude of changes to the calculated amortization period due to the actual experience over the plan year are provided in Table V -
3.

| Table V-3: Reconciliation of Calculated Amortization Period |  |
| :--- | :--- |
| 1. Amortization Period Calculated as of July 1, 2008 | $\frac{\text { Years }}{30.0}$ |
| 2. Change in years due to: |  |
| Expected Decrease | $(1.0)$ |
| COLA Experience | $(2.4)$ |
| Salary Experience | $(1.3)$ |
| Turnover Experience | 2.0 |
| Other Liability Experience | 0.5 |
| Asset Experience | $\frac{7.2}{5.0}$ |
| Total |  |
| 3. Amortization Period Calculated as of July 1, $2009(1+2)$ | 35.0 |
|  |  |

If the calculated amortization period exceeds the statutory maximum, the Board may schedule an increase(s) in the employer contribution rate in order to re-establish a 30 -year amortization period as of the valuation date. For the Board's consideration, in Table V-4 we have provided a schedule of increases to the employer contribution rate that will satisfy a 30-year amortization period as of July 1, 2009.

Table V-4: Alternative Employer Contribution Rate Increases

## Section VI: Accounting Statement Information

The Tables provided in this Section present disclosure information necessary to comply with GASB requirements and are relevant for the annual financial reporting of the System.

Table VI-1: GASB Statement No. 25 Schedule of Funding Progress

| Actuarial Valuation as of July 1 | Actuarial Value of Assets | $\begin{gathered} \text { Actuarial } \\ \text { Accrued } \\ \text { Liability (AAL) } \end{gathered}$ | Actuarial Assets as a \% of Actuarial Liabilities | Unfunded AAL <br> (UAAL) | Annual Active Member Payroll | UAAL as a \% of Active Member Payroll |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 2009 | \$3,482,220 | \$4,564,111 | 76.3\% | \$1,081,89 | \$1,084,154 | 99.8\% |
| 2008 | 3,363,136 | 4,318,955 | 77.9\% | 955,819 | 1,060,747 | 90.1\% |

## Appendix B: Actuarial Assumptions and Methods

## Investment Rate of Return

Assumed annual rate of $8.00 \%$ net of investment and administrative expenses composed of a 3.00\% inflation component and a $5.00 \%$ real rate of return component.

## Rates of Annual Salary Increase

Rates of annual salary increase are assumed to vary for the first 11 years of service due to expected merit and promotional increases. Beginning with the $12^{\text {th }}$ year of service, the assumed annual rate of increase is $4.50 \%$ for both groups and for all future years of service.

The $4.50 \%$ rate of increase is composed of a $3.00 \%$ inflation component and a $1.50 \%$ real rate of wage increase (productivity) component.

| Rates of Annual Salary Increase <br> Assumption |  |
| :---: | :---: |
| Years of | Annual Rate of <br> Increase |
| Service | $11.50 \%$ |
| $\mathbf{0}$ | $6.75 \%$ |
| $\mathbf{1}$ | $5.75 \%$ |
| $\mathbf{2}$ | $5.50 \%$ |
| $\mathbf{3}$ | $5.25 \%$ |
| $\mathbf{4}$ | $5.00 \%$ |
| $\mathbf{5}$ | $4.75 \%$ |
| $\mathbf{6}$ | $4.75 \%$ |
| $\mathbf{7}$ | $4.75 \%$ |
| $\mathbf{8}$ | $4.75 \%$ |
| $\mathbf{9}$ | $4.75 \%$ |
| $\mathbf{1 0}$ | $4.75 \%$ |
| $\mathbf{1 1}$ | $4.50 \%$ |
| $\mathbf{1 2 +}$ |  |

## Appendix B: Actuarial Assumptions and Methods

## Active Member Decrement Rates

a. Table below provides a summary of the assumed rates of service retirement, mortality while actively employed, and disability.

| Annual Rates of Decrements |  |  |  |
| :---: | :---: | :---: | :---: |
| Age | Service <br> Retirement* | Pre- <br> Retirement <br> Mortality | Disability |
| 20 |  | $0.03 \%$ | $0.12 \%$ |
| 25 |  | $0.03 \%$ | $0.14 \%$ |
| 30 |  | $0.04 \%$ | $0.18 \%$ |
| 35 |  | $0.07 \%$ | $0.35 \%$ |
| 40 | $20.00 \%$ | $0.10 \%$ | $0.46 \%$ |
| 45 | $20.00 \%$ | $0.14 \%$ | $0.69 \%$ |
| 50 | $14.00 \%$ | $0.27 \%$ | $0.86 \%$ |
| 55 | $15.00 \%$ | $0.44 \%$ |  |
| 60 | $25.00 \%$ | $0.63 \%$ |  |
| 64 |  |  |  |
|  |  |  |  |

* Plus an additional 22\% for participants under age 55 in the year they first become eligible for service retirement.

All employees are assumed to retire by age 65. In addition, 25\% of disabilities are assumed to be duty-related, and 5\% of pre-retirement deaths are assumed to be accidental (duty-related).
b. Table below provides a summary of the assumed rates of withdrawal for active members prior to eligibility for retirement.

| Probability of Decrement Due to Withdrawal |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Appendix B: Actuarial Assumptions and Methods

## Post-Retirement Mortality

For healthy retirees and beneficiaries, the UP-94 Mortality Table rates, with the female rates set back one year and male rates set forward three years. A separate table of mortality rates is used for disabled retirees. The following are sample rates for the retirees and beneficiaries:

| Post-Retirement Mortality Assumption    <br> $\underline{\text { Healthy }}$    <br> $\frac{\text { Age }}{50}$    |  |  |  |  | $\underline{\text { Male }}$ | $\frac{\text { Female }}{0.14 \%}$ | $\underline{\text { Disabled }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 55 | $0.39 \%$ | $\underline{\text { All }}$ |  |  |  |  |  |
| 60 | $0.68 \%$ | $0.22 \%$ | $2.30 \%$ |  |  |  |  |
| 65 | $1.23 \%$ | $0.42 \%$ | $2.89 \%$ |  |  |  |  |
| 70 | $2.14 \%$ | $0.82 \%$ | $3.62 \%$ |  |  |  |  |
| 75 | $3.35 \%$ | $1.37 \%$ | $4.07 \%$ |  |  |  |  |
| 80 | $5.40 \%$ | $2.19 \%$ | $4.43 \%$ |  |  |  |  |
| 85 | $8.87 \%$ | $3.80 \%$ | $5.05 \%$ |  |  |  |  |

## Marriage Assumption

$100 \%$ of all active members are assumed to be married, with female spouses being 4 years younger than males.

## Asset Valuation Method

The actuarial value of assets is equal to the market value of assets less a ten-year phase in of the excess (shortfall) between expected market investment return and actual net investment income (excess returns and shortfalls determined prior to July 1, 2008 remain with a five-year phase in).

## Appendix B: Actuarial Assumptions and Methods

## Actuarial Cost Method

The contribution rate is set by statute for both employees and employers. The funding period is determined, as described below, using the Entry Age Normal actuarial cost method. The Entry Age Normal actuarial cost method allocates the plan's actuarial present value of future benefits to various periods based upon service. The portion of the present value of future benefits allocated to years of service prior to the valuation date is the actuarial accrued liability, and the portion allocated to years following the valuation date is the present value of future normal costs. The normal cost is determined for each active member as the level percent of payroll necessary to fully fund the expected benefits to be earned over the career of each individual active member. The normal cost is partially funded with active member contributions with the remainder funded by employer contributions.

An unfunded accrued liability exists in the amount equal to the excess of accrued liability over valuation assets. The amortization period of the System is the number of years required to fully amortize the unfunded accrued liability with the expected amount of employer contributions in excess of the employers' portion of the normal cost.

The calculation of the amortization period takes into account scheduled increases to contribution rates applicable to future years and payroll growth. Also, the calculation of the amortization period reflects additional contributions the System receives with respect to return to work retirees. These contributions are assumed to grow at the same payroll growth rate as for active employees. It is assumed that amortization payments are made monthly at the end of the month.

## Unused Annual Leave

To account for the effect of unused annual leave on Annual Final Compensation, liabilities for active members are increased $3.75 \%$

## Unused Sick Leave

To account for the effect of unused sick leave on members' final credited service, the service of active members who retire is increased 3 months

## Future Cost-of-living Increases

Benefits are assumed to increase $2 \%$ annually beginning on the July $1^{\text {st }}$ next following receipt of 12 monthly benefit payments.

## Administrative and Investment Expenses

The investment return assumption represents the expected return net of all administrative and investment expenses.

## Payroll Growth Rate

The total annual payroll of active members (also applies rehired retiree participants) is assumed to increase at an annual rate of $4.00 \%$. This rate does not anticipate increases in the number of members.

## Changes from Prior Valuation

None.

## Appendix C: Summary of Plan Provisions

This summary of plan provisions is based on our understanding of the benefits as described by the South Carolina Code of Laws, summary plan descriptions and the South Carolina Retirement Systems. It is intended to only describe the essential features of the plan. All eligibility requirements and benefit amounts shall be determined in strict accordance with the law.

## Effective Date

July 1, 1962

## Eligibility Requirements

All police officers or firefighters who work at least 1,600 hours and have compensation of at least \$2,000 during the fiscal year.

## Creditable Service

Creditable service means service during which contributions have been made. This is counted in years, months, and days.

There are a number of different types of services that may be purchased by an employee under special rules, such as military service.

## Average Final Compensation (AFC)

The total of the highest 12 consecutive quarters of compensation earned divided by 3 . Compensation generally includes gross salary or wages, overtime, sick pay, wage deferrals, and termination pay for unused annual leave. The unused annual leave is added to the sum of the highest 12 consecutive quarters prior to dividing by 3 . For members who joined the system on or after January 1, 1996, compensation for benefit and contribution purposes is limited in accordance with IRS Code Section 401(a)17.

## Normal Retirement

Eligibility - Attainment of age 55, and completion of 5 years of creditable service or completion of 25 years of creditable service.

Benefit - $2.14 \%$ of AFC times creditable service (Class II).

## Disability Retirement

Eligibility - Disability prior to age 55 with at least 5 years of creditable service. The service requirement is waived for job related disability.

Benefit - Benefit equal to the amount of retirement benefit that would have been payable assuming continued employment to age 55 and AFC at date of disability.

## Death Benefits

Death prior to age 55
Prior to completion of 15 years of creditable service:
Refund of employee contributions with interest plus Group Life Insurance in a lump sum equal to annual compensation. Group Life Insurance payable only to those whose employer participates and with at least 1 year of creditable service, unless death is job related

## Appendix C: Summary of Plan Provisions

After completion of 15 years of creditable service:
Same as above, however, instead of the refund of employee contributions with interest, the beneficiary may elect to receive an annuity equal to the amount that would have been payable had the member terminated the day before death and elected payment to commence at age 55 under Option B described below.

Death after 55
Same as above.

## Accidental Death Benefit

If death occurs and is duty related, then a monthly annuity equal to $50 \%$ of the member's compensation at the time of death is paid to the statutory beneficiary until the beneficiary's death.

## Member Contribution

The member contribution rate is $6.50 \%$ of compensation. Accumulated member contributions are credited with interest at the rate of $4 \%$ per year.

## Vested Benefit upon Termination

Eligibility - 100\% vesting upon completion of 5 years of creditable service and refund benefit declined.
Benefit - Accrued service retirement benefit as of date of termination payable as of age 55.

## Refund Benefit

Eligibility - All nonvested members, and at members election, vested members.
Benefit - Return of employee contributions plus interest.

## Optional Forms of Retirement Income

Option A Monthly life annuity with guaranteed return of employee contributions plus interest. (This is the normal form of payment).

Option B Monthly life annuity with $100 \%$ of reduced benefit continued to beneficiary upon death, reverting to maximum option if beneficiary predeceases retiree.

Option C Monthly life annuity with $50 \%$ of reduced benefit continued to beneficiary upon death, reverting to maximum option if beneficiary predeceases retiree.

Options B and C are actuarially reduced.

## Cost of Living Adjustment

Beginning the July $1^{\text {st }}$ following one year of receiving benefits, the monthly benefit amount will increase by the calendar year change in CPI but not to exceed $2 \%$. Additional ad hoc COLAs may be paid as approved by the State Budget and Control Board and based upon the financial condition of the System and the requirements of Act 311 (amortization period less than 25 years, amortization period decrease by at least one-year after granting ad-hoc COLA, etc.).

## Changes from Prior Valuation

Appendix C: Summary of Plan Provisions

None
