

# South Carolina Retirement System (SCRS)

ACTUARIAL VALUATION REPORT  
AS OF July 1, 2017

December 18, 2017

Public Employee Benefit Authority  
South Carolina Retirement Systems  
P.O. Box 11960  
Columbia, SC 29211-1960

**Subject: Actuarial Valuation as of July 1, 2017**

Dear Members of the Board:

This report describes the current actuarial condition of the South Carolina Retirement System (SCRS), determines the calculated employer and member contribution rates, and analyzes changes in the System's financial condition. In addition, the report provides various summaries of the data. A separate report is issued with regard to valuation results determined in accordance with Governmental Accounting Standards Board (GASB) Statement Nos. 67 and 68. Results of this report should not be used for any other purpose without consultation with the undersigned. Valuations are prepared annually as of July 1, the first day of the plan year for SCRS. This report was prepared at the request of the Board of Directors of the South Carolina Public Employee Benefit Authority (Board) and is intended for use by the Public Employee Benefit Authority (PEBA) staff and those designated or approved by the Board.

#### **FINANCING OBJECTIVES AND FUNDING POLICY**

The Retirement System Funding and Administration Act of 2017 was signed into law April 25, 2017, and became effective on July 1, 2017. This legislation amended Section 9-1-1085 of the South Carolina Code, such that the employer and member contribution rate in effect for the fiscal year ending June 30, 2018 are 13.56% and 9.00%, respectively. Also, the employer contribution rate is scheduled to increase at the rate of 1.00% of pay for each of the five subsequent fiscal years (i.e. an ultimate employer contribution rate of 18.56% of pay for fiscal year 2023).

Additionally, the Statute specifies that that the maximum amortization period is 30 years as of July 1, 2017 and the maximum amortization period will decrease by one year in each of the next ten years until reaching a maximum 20-year funding period on July 1, 2027. The contribution rates determined by an actuarial valuation must be sufficient to maintain an amortization period that does not exceed 20 years each year thereafter. Finally, the Board is not permitted to decrease the employer and member contribution rates until the funded ratio of the plan is at least 85%.

If new legislation is enacted between the valuation date and the date the contribution rate becomes effective, the Board may adjust the calculated rate before certifying them, in order to reflect this new legislation. Such adjustments are based on information supplied by the actuary.

#### **PROGRESS TOWARD REALIZATION OF FINANCING OBJECTIVES**

The funded ratio (the ratio of the actuarial value of assets to the actuarial accrued liability) is a standard measure of a plan's funded status. In the absence of benefit improvements, it should increase over time, until it reaches at least 100%.

The funded ratio of the System decreased from 59.5% to 56.3%. Absent favorable investment or liability experience, we expect the funded ratio will slightly decrease for the next several years before it begins to gradually improve.

If the market value of assets had been used in the calculation instead of the actuarial (smoothed) value of assets, the funded ratio for the System would have been 53.2%, compared to 52.3% in the prior year. The slight increase in the funded ratio on a market value basis is primarily due to the actual investment return on plan assets during FY 2017 exceeding the 7.50% assumed rate of return. Specifically, the market value of assets earned an 11.88% return determined using the method specified by GASB 67 and reported in the financial statement of the South Carolina Retirement Systems for the year ending June 30, 2017. The 11.8% return documented in this report was determined on a dollar-weighted basis and is net of expenses and assumed mid-year cash flows.

#### **ASSUMPTIONS AND METHODS**

South Carolina State Code also requires that an experience analysis that reviews the economic and demographic assumptions be performed at least every five years. The last experience study was conducted for the five-year period ending June 30, 2015. The investment return assumption is a prescribed assumption in Section 9-16-335 in South Carolina State Code. The Retirement System Funding and Administration Act of 2017 decreased the assumed rate of return from 7.50% to 7.25% for the July 1, 2017 actuarial valuation. There were no other assumption changes since the prior actuarial valuation.

It is our opinion that the current assumptions are internally consistent and reasonably reflect the anticipated future experience of the System. The results of the actuarial valuation are dependent on the actuarial assumptions used. Actual results can, and almost certainly will, differ as actual experience deviates from the assumptions.

Even seemingly minor changes in the assumptions can materially change the liabilities, calculated contribution rate, and funding periods. The actuarial calculations are intended to provide information for rational decision making.

#### **BENEFIT PROVISIONS**

The benefit provisions reflected in this valuation are those which were in effect on July 1, 2017. There were no legislative changes enacted since the prior valuation that changed or modified the benefits that members earn or receive.

#### **DATA**

Member data for retired, active and inactive members was supplied as of July 1, 2017, by the PEBA staff. The staff also supplied asset information as of July 1, 2017. We did not audit this data, but we did apply a number of tests to the data, and we concluded that it was reasonable and consistent with the prior year's data. GRS is

not responsible for the accuracy or completeness of the information provided to us by PEBA.

**CERTIFICATION**

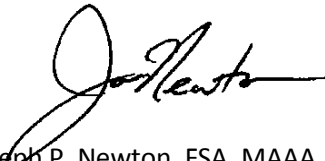

We certify that the information presented herein is accurate and fairly portrays the actuarial position of SCRS as of July 1, 2017.

All of our work conforms with generally accepted actuarial principles and practices, and is in conformity with the Actuarial Standards of Practice issued by the Actuarial Standards Board. In our opinion, our calculations also comply with the requirements of South Carolina Code of Laws and, where applicable, the Internal Revenue Code, ERISA, and the Statements of the Governmental Accounting Standards Board.

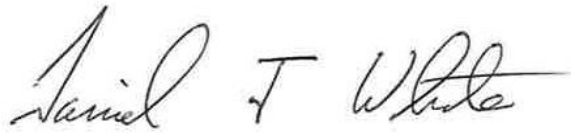

The undersigned are independent actuaries and consultants. Mr. Newton and Mr. White are Enrolled Actuaries and Members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries. Both are experienced in performing valuations for large public retirement systems.

Sincerely,

**Gabriel, Roeder, Smith & Co.**

- Assumption/method changes	1,309,385	467,722
- Asset experience	1,005,145	1,131,589
- Salary experience	147,345	(17,241)
- Other liability experience	(174,796)	(8,695)
- Legislative Changes	<u>0</u>	<u>0</u>
• End of Year UAAL	\$21,133,155	\$18,565,938

<sup>1</sup> The required contribution rates shown for 2016 were established by Section 9-1-1085 of the South Carolina Code prior to enactment of the Retirement System Funding and Administration Act of 2017. The required contribution rates shown for 2017 reflect the changes due to the enactment of the Retirement System Funding and Administration Act of 2017. The actual employer contribution rates in effect for FY 2017, FY 2018, and FY 2019, are 11.56%, 13.56%, and 14.56%, respectively. Similarly, the actual member contribution rates in effect for FY 2017, FY 2018, and FY 2019, are 8.66%, 9.00%, and 9.00%, respectively.

<sup>2</sup> The employer contribution rates shown above include the cost of incidental death benefits.

<sup>3</sup> The funding period for 2017 is determined on an actuarial value of asset basis and is based on the contribution rate scheduled to become effective for FY 2019 (i.e. beginning July 1, 2018 and ending June 30, 2019).

## Executive Summary (Continued)

The unfunded actuarial accrued liability increased by \$2.567 billion since the prior year’s valuation to \$21.133 billion. The largest source of this increase is the \$1.309 billion increase in actuarial accrued liability due to the decrease in the assumed rate of return to 7.25%, followed by the recognition of deferred investment losses experienced in prior fiscal years in the actuarial value of assets (i.e. \$1.005 billion was recognized in the July 1, 2017 valuation). There was also a \$0.280 billion increase because the contributions to the system attributable to financing the unfunded actuarial accrued liability were less than the interest cost on the unfunded liability.

Below is a chart with the historical actuarial value of assets and actuarial accrued liability for SCRS. The divergence in the assets and liabilities over the last 10 years has generally been due to a combination of: (i) the actual investment experience being less than the System’s expected investment return assumption, (ii) increases in the actuarial accrued liability due to cost of living adjustments provided to retirees prior to the enactment of retirement reform legislation in 2012, and (iii) assumption changes in 2011, 2016, and again in 2017.

Effective July 1, 2017, the Retirement System Funding and Administration Act of 2017 increased the employer and member contribution rate to 13.56% and 9.00%, respectively. This legislation will also increase the employer contribution rate by 1.00% for each of the next five subsequent fiscal years. These scheduled increases in the employer contribution rate and the maximum amortization that is specified in state statute will, in time, result in improved financial security of the System.

Also, note that the current funding policy utilizes a level percentage of payroll amortization, which assumes that covered payroll will increase at the rate of 3.00% per year in the future. As a result, the amortization payments will not be sufficient to cover all of the interest charges on the UAAL until the funding period decreases to approximately 20 years. Therefore, stakeholders should expect the dollar amount of the unfunded actuarial accrued liability to gradually increase until the funding period decreases below 20 years.

## **SECTION B**

---

### **DISCUSSION**

## Discussion

The results of the July 1, 2017 actuarial valuation of the South Carolina Retirement System are presented in this report. The primary purposes of the valuation report are to depict the current financial condition of the System, determine the annual required contribution, and analyze changes in the System's financial condition. In addition, the report provides various summaries of the data.

This section discusses the determination of the current funding requirements and the System's funded status, as well as changes in financial condition of the retirement system.

All of the actuarial and financial tables referenced by the other sections of this Report appear in Section C. Section D provides member data and statistical information. Appendices A and B provide summaries of the principle actuarial assumptions and methods and plan provisions. Finally, Appendix C provides a glossary of technical terms that are used throughout this report.

## Funding Progress

The funded ratio decreased from 59.5% to 56.3% since the prior valuation. Chart 2, shown below provides a 10-year history of the System’s funded ratio. The gradual decline in the funded ratio over the last 10 years has generally been due to a combination of: (i) the actual investment experience being less than the System’s expected investment return assumption, (ii) increases in the actuarial accrued liability due to benefit adjustments provided to retirees prior to the enactment of retirement reform legislation in 2012, and (iii) assumption changes adopted in 2011, 2016, and in 2017. Table 10, Schedule of Funding Progress, in the following section of the report provides additional detail regarding the funding progress of the Retirement System.

Absent future favorable investment or demographic experience, or legislative changes, we expect the funded ratio to slightly decrease for the next two to three years, then begin to gradually improve. Also, based on the new funding policy and contribution rates, we expect the dollar amount of the unfunded actuarial accrued liability, or the difference between the actuarial accrued liability and the actuarial value of assets, to gradually increase for the next five to seven years before beginning to decrease.

## Asset Gains/ (Losses)

The actuarial value of assets (“AVA”) is based on a smoothed market value of assets, using a systematic approach to phase-in the difference between the actual and expected investment return on the market value of assets (adjusted for receipts and disbursements during the year). This is appropriate because it dampens the short-term volatility inherent in investment markets. The returns are computed net of investment expenses. The actuarial value of assets remained relatively unchanged at \$27.3 billion since the prior valuation. Table 8 in the following section of the report provides the development of the actuarial value of assets.

The rate of return on the market value of assets on a dollar-weighted basis for fiscal year 2017 was 11.8%; which is greater than the 7.50% expected annual return. The return on an actuarial (smoothed) asset value was 3.7%. This difference in the estimated return on market value and actuarial value illustrates the smoothing effect of the asset valuation method.

The market value of assets is \$1.5 billion less than the actuarial value of assets, which signifies that the retirement system is in a position of deferred losses. Therefore, unless the System experiences investment returns in excess of the assumed rate of return and in excess of the amount of the existing deferred investment losses, then the future recognition of these deferred losses is expected to increase the unfunded actuarial accrued liability.

Tables 6 and 7 in the following section of this report provide asset information that was included in the annual financial statements of the System. Also, Table 9 shows the estimated yield on a market value basis and on the actuarial asset valuation method.

## Actuarial Gains/ (Losses) and the Funding Period

The annual actuarial valuation is a snapshot analysis of the benefit liabilities, assets and funded position of the System as of the first day of the plan year. In any one fiscal year, the experience can be better or worse from that which is assumed or expected. The actuarial assumptions do not necessarily attempt to model what the experience will be for any one given fiscal year, but instead try to model the overall experience over many years. Therefore, as long as the actual experience of the Retirement System is reasonably close to the current assumptions, the long-term funding requirements of the System will remain relatively consistent.

The unfunded actuarial accrued liability (UAAL) has increased from \$18.6 billion in 2016 to \$21.1 billion in 2017. The table below shows the source of the gains and losses and the impact of those gains and losses on the UAAL.

<b>Reconciliation of UAAL</b>	
(Dollars in thousands)	
• Beginning of Year UAAL	\$18,565,938
- Interest on UAAL	1,392,445
- Amortization payment	(1,112,307)
- Assumption/method changes	1,309,385
- Asset Experience	1,005,145
- Salary Experience	147,345
- Other liability experience	(174,796)
- Legislative changes	<u>0</u>
• End of Year UAAL	\$21,133,155

The System experienced a net \$41 million gain in liability, due to salary and other demographic experience. This net gain is approximately 0.1% of the total actuarial accrued liability. The following table reconciles the change in the funding period from the prior year's valuation based on the contribution rates that are currently in effect for fiscal year 2017.

<b>Change in Funding Period (Years)</b>	
• 2016 Valuation and Board Adopted Contribution Rates	29.6
- Expected experience	(1.0)
- Assumption and method changes	9.9
- Asset experience	3.3
- Salary and demographic experience	(0.9)
- Legislative changes <sup>1</sup>	<u>(12.9)</u>
- Total Change	(1.6)
• 2017 Valuation and FY 2018 Contribution Rates	28.0
- Scheduled contribution rate increase in FY 2019	(3.7)
• 2017 Valuation and Scheduled FY 2019 Contribution Rates	24.3

<sup>1</sup> The statutory change in the employer and member contribution rate from FY 2017 to FY 2018.

## Actuarial Gains/ (Losses) and the Funding Period (Continued)

The Retirement System Funding and Administration Act of 2017 amended Section 9-1-1085 of the South Carolina Code, such that the employer contribution rate is scheduled to increase at the rate of 1.00% of pay for each of the subsequent fiscal years after fiscal year 2018 to an ultimate employer contribution rate of 18.56% of pay for fiscal year 2023 (assuming that plan does not exceed the maximum permitted funding period that this legislation also amended). The funding period documented in this actuarial valuation only reflects the scheduled employer and member contribution that is to become effective for the 2019 fiscal year (i.e. the fiscal year beginning July 1, 2018 and ending July 1, 2019). However, we project the System will attain a 100% funded ratio in the year 2037 after reflecting the contribution rate increases that are scheduled to become effective after the 2019 fiscal year (assuming all assumptions are met each future year, including a 7.25% return on the market value of assets).

## Actuarial Assumptions and Methods

In determining costs and liabilities, actuaries use assumptions about the future, such as rates of salary increase, probabilities of retirement, termination, death and disability, and an annual investment return assumption. South Carolina State Code also requires that an experience analysis that reviews the economic and demographic assumptions be performed every five years and the last experience study was conducted for the five-year period ending June 30, 2015.

The investment return assumption is a prescribed assumption in Section 9-16-335 in South Carolina State Code and the Retirement System Funding and Administration Act of 2017 decreased the assumed rate of return from 7.50% to 7.25% for the July 1, 2017 actuarial valuation. There were no other assumption changes since the prior actuarial valuation.

Appendix A includes a summary of the actuarial assumptions and methods used in this valuation. It is our opinion that the assumptions are internally consistent, reasonable, and reflect anticipated future experience of the System. The next experience study will be conducted no later than as of June 30, 2020.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. This report does not include a more robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment.

An actuarial valuation assumes that all assumptions will be met in future years, including a 7.25% return on the actuarial value of assets determined as of the actuarial valuation date. Establishing the contribution rates, funding period, and other financial metrics on an actuarial value of asset basis is consistent with applicable actuarial standards of practice, industry prevalence, and applicable provisions in South Carolina State Code.

Emerging experience due to liabilities or investments that is different than assumed (including the recognition of previously deferred investment losses) may result in a change in the required contribution rate and or funding period that is different than expected based on the prior actuarial valuation. Also, separate projections provided outside of this report that may illustrate the financial effect of future gains or losses on actuarial basis in subsequent years may be useful for business making decisions, but such projections should not be misunderstood as documentation of satisfaction of the maximum amortization period that is specified in State Code.

## Benefit Provisions

Appendix B of this report includes a summary of the benefit provisions for SCRS. There were no legislative changes enacted since the prior actuarial valuation that changed or modified the benefits that members earn or receive. Below is a summary of the retirement provisions for Class Two members- members hired prior to July 1, 2012, and Class Three members- members hired after June 30, 2012.

### Summary of Retirement Provisions for:

#### *Class Two Members (members hired prior to July 1, 2012)*

- Average Final Compensation (AFC) is based on the highest 12 consecutive quarters of compensation. The determination of a member's AFC also includes up to 45 days of unused annual leave paid at termination. Monthly benefits are based on one-twelfth of this amount.
- The retirement benefit amount is equal to 1.82% of the member's AFC times the member's credited service (years). Credited service may include up to 90 days of unused sick leave.
- Members are eligible to commence a normal retirement benefit after they have (i) 28 years of credited service or (ii) attained age 65 with 5 years of earned service.
- At each July 1 after their first full year of retirement, annuitants will receive a benefit adjustment equal to the lesser of 1.00% of their retirement benefit or \$500 per annum.

#### *Class Three Members (members hired after June 30, 2012)*

- Average Final Compensation (AFC) is based on the highest twenty (20) consecutive quarters of compensation. The determination of a member's AFC will not include unused annual leave paid at termination. Monthly benefits are based on one-twelfth of this amount;
- The retirement benefit is equal to 1.82% of the member's AFC times the member's credited service (years). Credited service will not include unused sick leave.
- Members are eligible to commence a normal retirement benefit after they have (i) attained age 65 with eight years of earned service or (ii) the combination of the member's age and years of credited service equals or exceeds 90 (i.e. the rule of 90).
- At each July 1 after their first full year of retirement, annuitants will receive a benefit adjustment equal to the lesser of 1.00% of their retirement benefit or \$500 per annum.

**Summary of Cost Items**  
(Dollar amounts expressed in thousands)

	July 1, 2017	July 1, 2016
	(1)	(2)
1. Projected payroll of active members <sup>1</sup>	\$ 8,592,885	\$ 8,213,042
2. Present value of future pay	\$ 69,056,017	\$ 65,013,981
3. Normal cost rate		
a. Total normal cost rate	10.72%	10.27%
b. Less: member contribution rate	<u>-9.00%</u>	<u>-9.09%</u>
c. Employer normal cost rate	1.72%	1.18%
4. Actuarial accrued liability for active members		
a. Present value of future benefits	\$ 23,228,609	\$ 21,097,284
b. Less: present value of future normal costs	<u>(6,725,540)</u>	<u>(6,095,180)</u>
c. Actuarial accrued liability	\$ 16,503,069	\$ 15,002,104
5. Total actuarial accrued liability		
a. Retirees and beneficiaries	\$ 30,745,598	\$ 29,830,649
b. Inactive members	1,126,058	1,027,153
c. Active members (Item 4c)	<u>16,503,069</u>	<u>15,002,104</u>
d. Total	\$ 48,374,725	\$ 45,859,906
6. Actuarial value of assets	\$ 27,241,570	\$ 27,293,968
7. Unfunded actuarial accrued liability (UAAL) (Item 5d - Item 6)	\$ 21,133,155	\$ 18,565,938
8. Required Contribution Rate		
a. Employer normal cost rate	1.72%	1.18%
b. Employer contribution rate available to amortize the UAAL	<u>12.84%</u>	<u>10.81%</u>
c. Total employer contribution rate	14.56%	11.99%
9. Funding period based on the required employer contribution rate (years) <sup>2</sup>	24	30
10. Applicable statutorily required contribution rates <sup>3</sup>		
a. Employer contribution rate	14.56%	11.99%
b. Member contribution rate	9.00%	9.09%

<sup>1</sup> The projected payroll does not include payroll for members in ORP, TERI, and who are working retirees.

<sup>2</sup> The funding period for 2017 is determined on an actuarial value of asset basis and is based on the contribution rate scheduled to become effective for FY 2019 (i.e. beginning July 1, 2018 and ending June 30, 2019).

<sup>3</sup> The required contribution rates shown for 2016 were established by Section 9-1-1085 of the South Carolina Code prior to enactment of the Retirement System Funding and Administration Act of 2017. The required contribution rates shown for 2017 reflect the changes due to the enactment of the Retirement System Funding and Administration Act of 2017. The actual employer contribution rates in effect for FY 2017, FY 2018, and FY 2019, are 11.56%, 13.56%, and 14.56%, respectively. Similarly, the actual member contribution rates in effect for FY 2017, FY 2018, and FY 2019, are 8.66%, 9.00%, and 9.00%, respectively.

**Actuarial Present Value of Future Benefits**  
**(Dollar amounts expressed in thousands)**

	<u>July 1, 2017</u>	<u>July 1, 2016</u>
	(1)	(2)
1. Active members		
a. Service retirement	\$ 20,431,177	\$ 18,487,417
b. Deferred termination benefits and refunds	688,474	679,251
c. Survivor benefits	658,227	601,475
d. Disability benefits	<u>1,450,731</u>	<u>1,329,141</u>
e. Total	\$ 23,228,609	\$ 21,097,284
2. Retired members		
a. Service retirement	\$ 27,927,701	\$ 26,929,180
b. Disability retirement	1,704,564	1,707,619
c. Beneficiaries	1,111,051	1,035,629
d. Incidental death benefits	<u>2,282</u>	<u>158,221</u>
e. Total	\$ 30,745,598	\$ 29,830,649
3. Inactive members		
a. Vested terminations	\$ 886,346	\$ 804,384
b. Nonvested terminations	<u>239,712</u>	<u>222,769</u>
c. Total	\$ 1,126,058	\$ 1,027,153
4. Total actuarial present value of future benefits	\$ 55,100,265	\$ 51,955,086

## Analysis of Normal Cost

	July 1, 2017 (1)	July 1, 2016 (2)
1. Total normal cost rate		
a. Service retirement	7.29%	6.89%
b. Deferred termination benefits and refunds	2.21%	2.20%
c. Survivor benefits	0.35%	0.34%
d. Disability benefits	<u>0.75%</u>	<u>0.72%</u>
e. Total	10.60%	10.15%
2. Administrative expenses	0.12%	0.12%
3. Less: member contribution rate	<u>9.00%</u>	<u>9.09%</u>
4. Net employer normal cost rate	1.72%	1.18%

**Results of July 1, 2017 Valuation**  
(Dollar amounts expressed in thousands)

	July 1, 2017
	(1)
1. <u>Actuarial Present Value of Future Benefits</u>	
a. Present retired members and beneficiaries	\$ 30,745,598
b. Present active and inactive members	24,354,667
c. Total actuarial present value	\$ 55,100,265
2. <u>Present Value of Future Normal Contributions</u>	
a. Employee	\$ 6,215,042
b. Employer	510,498
c. Total future normal contributions	\$ 6,725,540
3. <u>Actuarial Liability</u>	\$ 48,374,725
4. <u>Current Actuarial Value of Assets</u>	\$ 27,241,570
5. <u>Unfunded Actuarial Liability</u>	\$ 21,133,155
6. <u>UAAL Amortization Rates based on an employer contribution rate of 14.56%</u>	
a. Active members	12.84%
b. TERI members (including employee contributions)	23.56%
c. ORP members	9.56%
d. Re-employed retirees (including employee contributions)	23.56%
7. <u>Unfunded Actuarial Liability Liquidation Period</u>	24 years

Note: The employer contribution rate includes the cost for incidental death benefits.

2017	27,241,570	48,374,725	21,133,155	56.3%	8,592,885	245.9%

<sup>1</sup> Covered payroll does not include payroll attributable to members in ORP, TERI, or working retirees.

## Summary of Principle Assumptions and Methods

Below is a summary of the principle economic assumptions, cost method, and the method for financing the unfunded actuarial accrued liability:

Valuation date:	July 1, 2017
Actuarial cost method:	Entry Age Normal
Amortization method:	Level percentage of payroll
Amortization period for contribution rate:	30-year maximum, closed period <sup>1</sup>
Asset valuation method:	5-Year Smoothed
Actuarial assumptions:	
Investment rate of return <sup>2</sup>	7.25%
Projected salary increases	3.00% to 12.50% (varies by service)
Inflation	2.25%
Post-retirement benefit adjustments <sup>3</sup>	1.00%
Retiree Mortality	2016 Public Retirees of South Carolina Mortality Table for Males and Females, projected using AA from the year 2016. Male rates multiplied by 100% for non-educators and 92% for educators. Female rates multiplied by 111% for non-educators and 98% for educators.

<sup>1</sup> The employer and member contribution rates are determined in accordance with Section 9-1-1085 of the South Carolina Code. For 2017, the funding period, determined on an actuarial value of asset basis, may not exceed 30 years for 2017. Contribution rates are not permitted to decrease until the ratio of the actuarial value of assets and the actuarial accrued liability is at least 85%.

<sup>2</sup> This is a prescribed assumption in Section 9-16-335 of South Carolina State Code.

<sup>3</sup> The benefit increase is the lesser of 1.00% or \$500 annually.

Includes Teacher and Employee Retention Incentive (TERI) participants.

Annual benefits added to rolls includes the benefit adjustments provided to continuing retirees.

## **APPENDIX A**

---

### **ACTUARIAL ASSUMPTIONS AND METHODS**

## Summary of Actuarial Methods and Assumptions

The following presents a summary of the actuarial assumptions and methods used in the valuation of the South Carolina Retirement System.

### Investment Rate of Return

Assumed annual rate of 7.25% net of investment and administrative expenses composed of a 2.25% inflation component and a 5.00% real rate of return, net of investment expenses.

This is a prescribed assumption set by another party in Section 9-16-335 of the South Carolina State Code.

### Rates of Annual Salary Increase

Rates of annual salary increase are assumed to vary for the first 20 years of service due to expected merit and promotional increases which differs by employee group. Beginning with the 21st year of service, the assumed annual rate of increase is 3.00% for both groups and for all future years of service.

The 3.00% rate of increase is composed of a 2.25% inflation component and a 0.75% real rate of wage increase (productivity) component.

Active Male & Female Salary Increase Rate				
Years of Service	General Employees		Teachers

75	0%	0%	100%	100%	0%	0%	100%	100%	100%

\* Retirement rate is 50% at the later of age 62 or when the member is first eligible for a normal retirement benefit (i.e. the first age the member is eligible to concurrently commence benefits and continue employment.)

\*\* The "Rule of 90" retirement rates do not apply if the "Rule of 90" is achieved after age 65.

b. Assumed rates of disability are shown in the following table.

Disability Rates				
Age	General Employees		Teachers	
	Males	Females	Males	Females
25	0.0504%	0.0440%	0.0419%	0.0458%
30	0.1008%	0.0616%	0.0629%	0.0616%
35	0.1512%	0.1232%	0.0838%	0.0616%
40	0.2520%	0.1584%	0.1572%	0.1074%
45	0.3528%	0.2288%	0.2620%	0.2200%
50	0.5040%	0.3872%	0.4192%	0.3520%
55	0.8064%	0.6160%	0.6812%	0.5720%
60	1.0080%	0.9416%	1.0480%	0.8800%
64	1.2600%	1.3112%	1.3100%	1.1000%

There is no differentiation between duty and nonduty related disability benefits.

c. Active Member Mortality

Rates of active member mortality are based upon the RP-2014 Mortality Table for Employees with applicable multipliers to better reflect anticipated experience and provide margin for future improvement in mortality.

Active Mortality Rates (Multiplier Applied)				
Age	General Employees		Teachers	
	Males	Females	Males	Females
25	0.0460%	0.0164%	0.0460%	0.0147%
30	0.0429%	0.0207%	0.0429%	0.0185%
35	0.0497%	0.0272%	0.0497%	0.0243%
40	0.0597%	0.0376%	0.0597%	0.0337%
45	0.0924%	0.0624%	0.0924%	0.0558%
50	0.1602%	0.1047%	0.1602%	0.0937%
55	0.2649%	0.1589%	0.2649%	0.1422%
60	0.4454%	0.2320%	0.4454%	0.2076%
64	0.7008%	0.3220%	0.7008%	0.2881%
Multiplier	95%	95%	95%	85%

For purposes of determining active death benefits, 5% of active deaths for general employees are assumed to be duty related.

d. Rates of Withdrawal

Rate of withdrawal for active members prior to eligibility for retirement are for each employee group and differ by gender and service. Sample rates are shown in the tables below.

Withdrawal Rates - Male General Employees															
Age	Years of Service

**Refund of Member Contributions**

The following percentage of vested members are assumed to elect to receive a refund of contributions upon termination of employment prior to becoming eligible to commence a service retirement benefit. This assumption is based on the plan’s experience.

Age:	<u>Less than 40</u>	<u>40 - 49</u>	<u>50 or More</u>
Refund rate:	45%	40%	35%

**Post Retirement Mortality**

- a. Healthy retirees and beneficiaries – The 2016 Public Retirees of South Carolina Mortality Table for Males and the 2016 Public Retirees of South Carolina Mortality Table for Females, projected using the AA projection table from the year 2016 and with multipliers based on plan experience. The following are sample rates of the base table:

<b>Nondisabled Annuitant Mortality Rates Before Projection (Multiplier Applied)</b>				
<b>Age</b>	<b>General Employees</b>		<b>Teachers</b>	
	<b>Males</b>	<b>Females</b>	<b>Males</b>	<b>Females</b>
50	0.2038%	0.1454%	0.1875%	0.1284%

70	5.0433%	3.5254%	5.0433%	3.5254%
75	6.7859%	5.1306%	6.7859%	5.1306%
80	9.5770%	7.6295%	9.5770%	7.6295%
85	14.1629%	11.3025%	14.1629%	11.3025%
90	21.6256%	16.5815%	21.6256%	16.5815%
Multiplier	125%	125%	125%	125%

## Asset Valuation Method

The actuarial value of assets is equal to the market value, adjusted for the five-year phase in of the actual investment return in excess of (or less than) the expected investment return on a market value of asset basis. This five-year phase in begins with the investment experience for the fiscal year ending June 30, 2016. The actual return is calculated net of investment expenses, and the expected investment return is equal to the assumed investment return rate multiplied by the prior year's market value of assets, adjusted for contributions, benefits paid, and refunds.

Expected earnings are determined using the assumed investment rate of return and the beginning of year actuarial value of assets (adjusted for receipts and disbursements during the year). The returns are computed net of administrative and investment expenses.

## Actuarial Cost Method

The Entry Age Normal actuarial cost method allocates the System's actuarial present value of future benefits to various periods based upon service. The portion of the present value of future benefits allocated to years of service prior to the valuation date is the actuarial accrued liability, and the portion allocated to years following the valuation date is the present value of future normal costs. The normal cost is determined for each active member as the level percent of payroll necessary to fully fund the expected benefits to be earned over the career of each individual active member. The normal cost is partially funded with active member contributions with the remainder funded by employer contributions. An unfunded accrued liability exists in the amount equal to the excess of accrued liability over valuation assets. The amortization period of the System is the number of years required to fully amortize the unfunded accrued liability, on an actuarial value of asset basis, with the expected amount of employer contributions in excess of the employers' portion of the normal cost.

Note, the principle financial measurement calculations in this actuarial valuation, which include the unfunded actuarial accrued liability, funded ratio, contributions rates, and funding period, are based on an actuarial value of assets (smoothed value) basis. The actuarial value of assets is a calculated asset value which may be greater than or less than the market value of assets and is used to dampen some of the volatility in the market value of assets. As a result, many of these measures would be different if they were determined on a market value of asset basis.

## Development of the Contribution Rate and Funding Period

The calculation of the employer and member contribution rate as well as the derived funding period takes into account several differences in the contributions paid by the various members as well as the delayed timing (if any) in the effective date of the new contribution rate. Specifically, the factors that are reflected in the calculation of the contribution rate include:

- 1) The cost (normal cost and actuarial accrued liability) due to incidental death benefits provided to members in the ORP.
- 2) Member and employer contributions made on the payroll of working retirees and members participating in TERI are being used to finance the unfunded actuarial accrued liability since these members do not have a normal cost. Also, the number of working retirees is expected to decrease due to changes in working after retirement provisions enacted with Act 278 and TERI will be completely eliminated after June 30, 2018.

- 3) The money collected on the payroll of member in ORP that is allocated to finance the unfunded liability in SCRS, which is the SCRS employer contribution rate less 5%, is less than the money collected on the payroll of members in SCRS to finance the unfunded actuarial accrued liability.
- 4) For purposes of calculating the amortization cost and funding period, discrete pay increases and continuous interest was assumed, with amortization payments made at the end of each month.

### **Unused Annual Leave**

To account for the effect of unused annual leave in Annual Final Compensation (AFC) of Class Two members, the AFC for Class Two members is increased 2.14% at their date of retirement. Unused annual leave is not included in the calculation of the AFC for Class Three members.

### **Unused Sick Leave**

To account for the effect of unused sick leave on credited service for Class Two members, the service of active Class Two members who retire is increased 3 months. Unused sick leave is not included in determining the credited service for Class Three members.

### **Future Post-Retirement Benefit Adjustments**

Benefits are assumed to increase by the lesser of 1.00% annually or \$500 beginning on the July 1st following the receipt of 12 monthly benefit payments. The \$500 limit in the annual increase is not indexed to escalate in future years.

### **Payroll Growth Rate**

The total annual payroll of active members (also applies to TERI, ORP and rehired retiree participants) is assumed to increase at an annual rate of 3.00%. This rate represents the underlying expected annual rate of wage inflation and does not anticipate increases in the number of members.

### **Other Assumptions**

1. Valuation payroll (used for determining the amortization contribution rate): Prior fiscal year payroll projected forward one year using the overall payroll growth rate. This was determined separately for TERI, and return to work employees by dividing the actual member contributions received during the prior fiscal year by the member contribution rate in effect for that year, and then projecting that amount forward one year.
2. The normal cost rate is increased by 0.12% to account for administrative expenses that are paid with plan assets.
3. Individual salaries used to project benefits: Actual salaries from the past fiscal year are used to determine the final average salary as of the valuation date. For future salaries, the salary from the last fiscal year is projected forward with one year's salary scale.
4. Pay increase timing: Beginning of (fiscal) year. This is equivalent to assuming that reported salaries represent amounts paid to members during the year ended on the valuation date.
5. Percent married: 100% of male and 100% of female employees are assumed to be married.
6. Age difference: Males are assumed to be three years older than their spouses.

7. Percent electing annuity on death (when eligible): All of the spouses of vested, married participants are assumed to elect an immediate life annuity.
8. Inactive Population: All non-vested members are assumed to take an immediate refund.
9. There will be no recoveries once disabled.
10. Decrement timing: Terminations for public school employees are assumed to occur at the beginning of the year. Decrements of all types are assumed to occur mid-year.
11. Eligibility testing: Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
12. Decrement relativity: Decrement rates are used directly from the experience study, without adjustment for multiple decrement table effects.
13. Incidence of contributions: Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in this report, and the actual payroll payable at the time contributions are made.
14. Benefit service: All members are assumed to accrue one year of eligibility service each year.
15. All calculations were performed without regard to the compensation limit in IRC Section 401(a)(17) and the benefit limit under IRC Section 415.

### **Participant Data**

Participant data was securely supplied in electronic text files. There were separate files for (i) active and inactive members, and (ii) members and beneficiaries receiving benefits.

The data for active members included birth date, gender, service with the current employer and total vesting service, salary, and employee contribution account balances. For retired members and beneficiaries, the data included date of birth, gender, spouse's date of birth (where applicable), amount of monthly benefit, date of retirement, and form of payment code.

Salary supplied for the current year was based on the annualized earnings for the year preceding the valuation date.

Assumptions were made to correct for missing or inconsistent data. These had no material impact on the results presented.

## **APPENDIX B**

---

### **BENEFIT PROVISIONS**

# Summary of Benefit Provisions for South Carolina Retirement System (SCRS)

**Effective Date:** July 1, 1945.

**Administration:** The South Carolina Public Employee Benefit Authority is responsible for the general administrative operations and day to day management of the Plan.

**Type of Plan:** This is a qualified governmental defined benefit retirement plan. Under GASB Statement Nos. 27, 67, and 68, it is considered to be a cost-sharing multiple-employer plan.

**Eligibility:** This System covers all permanent full-time or part-time employees of a covered employer (i.e. public school, state employer, city, county, and other local public governmental entity), unless specifically exempted by Statute or participate in the State Optional Retirement Program (ORP). Also, beginning with the 2012 general election, newly elected officials of the South Carolina General Assembly are also covered by this system.

**Employee Contributions:** Members are contributing 9.00% of earnable compensation for FY 2018. These contributions are "picked-up" under Section 414(h) of the Internal Revenue Code. Contributions are credited with interest at the rate of 4.0% per annum while the member is actively employed.

**Average Final Compensation (AFC):** The monthly average of the member's highest 12 consecutive quarters of earnable compensation (highest 20 consecutive quarters for Class Three members, members who are hired after June 30, 2012). Earnable compensation is the compensation that would be payable to a member if the member worked a full, normal working time, which includes gross salary, sick pay, and deferrals. Compensation due to overtime earned after December 31, 2012 will not be included unless that compensation is for time that is mandated by the employer.

The calculation of the AFC for Class One and Class Two members also includes up to 45 days pay for unused annual leave paid at termination. Members joining the System after January 1, 1996, have their compensation limited in accordance with IRC Section 401(a)(17) for determining benefits.

***Service Retirement (Unreduced):***

- a. Eligibility: Class Two members may retire with an unreduced benefit at age 65 with five years of earned service or after 28 years of creditable service, if earlier. Class Three members may retire with an unreduced benefit at age 65 with eight years of earned service or after the satisfying the rule of 90 (i.e. age plus credited service equals or exceeds 90).
- b. Monthly Benefit: 1.82% times the member's AFC times their years of creditable service.
- c. Payment Forms: Maximum retirement allowance (Option A) and survivor allowances under Options B and C.

***Service Retirement (Reduced):***

- a. Eligibility: Class Two members may retire with a reduced benefit upon attaining: (1) age 55 with 25 years of creditable service (minimum of 5 years of earned service), or (2) age 60 with five years of earned service. Class Three members may retire with a reduced benefit upon attaining age 60 with eight years of earned service.
- b. Reduction: A Class Two member's benefit will be reduced by either an age or service based reduction factor described below, whichever results in the most favorable benefit. A Class Three member's benefit will be reduced by the age based reduction factor described below.  
  
Age Based: Members retiring after age 60 will have their benefit reduced at the rate of 5% per year for each year of their retirement age precedes age 65.  
  
Service Based: 4% per year for each year of creditable service that is less than 28.
- c. Payment Forms: Maximum retirement allowance (Option A) and survivor allowances under Options B and C.

***Disability Retirement:***

- a. Eligibility: The eligibility for a disability retirement will be based upon the member's entitlement for Social Security disability benefits.
- b. Monthly Benefit: The net monthly disability benefit payable is equal to the member's benefit based on their credited service and AFC at the time of their disability.
- c. Payment Form: Maximum retirement allowance (Option A) and survivor allowances under Options B and C.
- d. Death while Disabled: A disabled member is treated as a retired member for purposes of determining a death benefit.

### ***Vesting and Refunds:***

- a. **Eligibility:** All members who are not vested are eligible for a refund when they terminate service. Class Two members are vested after five (5) years of earned service. Class Three members are vested after eight (8) years of earned service. Vested members may also elect to receive a refund in lieu of the deferred termination benefit described below.
- b. **Amount:** The refund benefit is the accumulated value of the member's contributions plus interest credited by the fund while they were actively employed. Members do not earn interest on their employee contribution account balance while they are inactive.

### ***Deferred Termination Benefit:***

- a. **Eligibility:** Member must be vested (i.e. 5 years of earned service for Class Two members and 8 years of earned service for Class Three members) and must elect to leave his/her contributions on deposit.
- b. **Monthly Benefit:** Same as the unreduced or reduced service retirement benefit, based on service and AFC at termination, and commencing once the member is eligible.
- c. **Payment Form:** Maximum retirement allowance (Option A) and survivor allowances under Options B and C.
- d. **Death Benefit:** The beneficiary of an inactive member who dies is entitled to receive the amount of the member's accumulated contributions (with interest). If the member met service eligibility requirement at their time of death, the beneficiary is eligible for a monthly survivor annuity benefit.

### ***Death while an Active Contributing Member:***

- a. **In General:** A refund of the member's accumulated contributions (with interest) is paid to the beneficiary of a deceased member.
- b. **Beneficiary Annuity:** If the deceased member (i) attained 5 or more years of earned service and (ii) had attained the age of 60 or had accumulated 15 or more years of creditable service, may elect to receive, in lieu of the accumulated contributions, a monthly benefit for life of the beneficiary determined under "Option B" described under the Optional Forms of Benefit. For purposes of the benefit calculation, a member under the age of 60 with less than 28 years of creditable service is assumed to be 60 years of age and no age reduction applies.

**Optional Forms of Benefit:** The System permits members to elect from three forms of benefit at retirement. In each case the benefit amount is adjusted to be actuarially equivalent to the "Option A" form. The optional forms are:

- a. **Option A (Maximum Retirement Allowance):** A life annuity. Upon the member's death, any remaining member contributions and interest will be paid to the member's designated beneficiary.

- b. Option B (100% Joint & Survivor with Pop-up): A reduced annuity payable as long as either the member or his/her spouse is living. In the event the member's designated beneficiary predeceases the member, then the member shall receive a retirement allowance equal to the maximum retirement allowance (Option A), plus any applicable benefit adjustments that would have been granted.
- c. Option C (50% Joint & Survivor with Pop-up): A reduced annuity payable during the member's life, and continues after the member's death at 50% of the rate paid to the member for the life of the member's designated beneficiary. In the event the member's designated beneficiary predeceases the member, then the member shall receive a retirement allowance equal to the maximum retirement allowance (Option A), plus any applicable benefit adjustments that would have been granted.

***Incidental Death Benefit:***

- a. Active Employees: The beneficiary (or estate) of an active employee of an employer participating in the Preretirement Death Benefit Program who completes at least one full year of membership service, will receive a death benefit equal to the member's annual earnable compensation at the time of death.

The one-year membership requirement is waived for members whose death is a result of an injury arising out of and in the course of performing his duties.

For purposes of incidental death benefits, active employees include those members who are receiving a retirement allowance and are actively reemployed and contributing to the system with a participating employer.

- b. Post Employment: The beneficiary (or estate) of a retiree, both current and retiree, of an employer participating in the Preretirement Death Benefit Program will receive a one-time payment upon the retiree's death. The amount of the one-time payment is based on the retiree's years of credited service at retirement.

Years of Service Credit	Death Benefit
10 or more, but less than 20	\$2,000
20 or more, but less than 28	\$4,000
28 or more	\$6,000

***Postretirement Benefit Increases***: Benefits paid to retired members or surviving spouses are increased annually in an amount equal to the lesser of 1.00% of the pension benefit or \$500. The \$500 limit in the annual increase is not indexed to escalate in future years.

A member electing a reduced early retirement is ineligible to receive a benefit increase until the second July 1 after the earlier of:

- (1) the member attains age 60, or
- (2) the member would have 28 years of creditable service had he not retired.

***Teacher and Employee Retention Incentive Program (TERI):***

- a. Eligibility: Active member eligible for a service retirement benefit.
- b. Benefits: A member electing to participate in the program agrees to continue employment for a period not to exceed five years. During this period, the member's service retirement benefit is placed in the system's trust fund on behalf of the member. No interest is paid on the member's deferred monthly benefit during the program period. Upon termination of the program, the member must receive the balance in the account.
- c. Other Adjustments: After June 30, 2005, the System shall recalculate the member's final compensation to reflect compensation increases earned after participating in the program. The AFC shall also include up to 45 days of unused annual leave.
- d. Death while in TERI: If a member dies during the program period, the member's designated beneficiary will receive a distribution of the balance of benefits accumulated in the member's TERI account.
- e. As a result of the pension reform legislation enacted in June 2012 (Act 278), the program will be closed and no members may participate in TERI after June 30, 2018.

## **APPENDIX C**

---

### **GLOSSARY**

## Glossary

**Actuarial Accrued Liability (AAL):** That portion, as determined by a particular Actuarial Cost Method, of the Actuarial Present Value of Future Plan Benefits which is not provided for by future Normal Costs. It is equal to the Actuarial Present Value of Future Plan Benefits minus the actuarial present value of future Normal Costs.

**Actuarial Assumptions:** Assumptions as to future experience under the Fund. These include assumptions about the occurrence of future events affecting costs or liabilities, such as:

- mortality, withdrawal, disablement, and retirement;
- future increases in salary;
- future rates of investment earnings and future investment and administrative expenses;
- characteristics of members not specified in the data, such as marital status;
- characteristics of future members;
- future elections made by members; and
- other relevant items.

**Actuarial Cost Method or Funding Method:** A procedure for allocating the Actuarial Present Value of Future Benefits to various time periods; a method used to determine the Normal Cost and the Actuarial Accrued Liability. These items are used to determine the ADC.

**Actuarial Gain or Actuarial Loss:** A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two Actuarial Valuation dates. Through the actuarial assumptions, rates of decrements, rates of salary increases, and rates of fund earnings have been forecasted. To the extent that actual experience differs from that assumed, Actuarial Accrued Liabilities emerge which may be the same as forecasted, or may be larger or smaller than projected. Actuarial gains are due to favorable experience, e.g., the Fund's assets earn more than projected, salaries do not increase as fast as assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, actuarial losses are the result of unfavorable experience, i.e., actual results that produce actuarial liabilities which are larger than projected. Actuarial gains will shorten the time required for funding of the actuarial balance sheet deficiency while actuarial losses will lengthen the funding period.

**Actuarially Equivalent:** Of equal actuarial present value, determined as of a given date and based on a given set of Actuarial Assumptions.

**Actuarial Present Value (APV):** The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions. For purposes of this standard, each such amount or series of amounts is:

- a. adjusted for the probable financial effect of certain intervening events (such as changes in compensation levels, marital status, etc.)
- b. multiplied by the probability of the occurrence of an event (such as survival, death, disability, termination of employment, etc.) on which the payment is conditioned, and
- c. discounted according to an assumed rate (or rates) of return to reflect the time value of money.

**Actuarial Present Value of Future Plan Benefits:** The Actuarial Present Value of those benefit amounts which are expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age and past and anticipated future compensation and service credits. The Actuarial Present Value of Future Plan Benefits includes the liabilities for active members, retired members, beneficiaries receiving benefits, and inactive, nonretired members either entitled to a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due.

**Actuarial Valuation:** The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial valuation for a governmental retirement system typically also includes calculations that provide the financial information of the plan, such as the funded ratio, unfunded actuarial accrued liability and the ADC.

**Actuarial Value of Assets or Valuation Assets:** The value of the Fund's assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets, but commonly actuaries use a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the ADC.

**Actuarially Determined:** Values which have been determined utilizing the principles of actuarial science. An actuarially determined value is derived by application of the appropriate actuarial assumptions to specified values determined by provisions of the law.

**Actuarially Determined Contribution (ADC):** The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation. The ADC consists of the Employer Normal Cost and the Amortization Payment.

**Amortization Method:** A method for determining the Amortization Payment. The most common methods used are level dollar and level percentage of payroll. Under the Level Dollar method, the Amortization Payment is one of a stream of payments, all equal, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the Amortization payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the stream of payments increases at the assumed rate at which total covered payroll of all active members will increase.

**Amortization Payment:** That portion of the pension plan contribution or ADC which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.

**Closed Amortization Period:** A specific number of years that is counted down by one each year, and therefore declines to zero with the passage of time. For example if the amortization period is initially set at 30 years, it is 29 years at the end of one year, 28 years at the end of two years, etc. See Funding Period and Open Amortization Period.

**Decremments:** Those causes/events due to which a member's status (active-inactive-retiree-beneficiary) changes, that is: death, retirement, disability, or termination.

**Defined Benefit Plan:** A retirement plan that is not a Defined Contribution Plan. Typically a defined benefit plan is one in which benefits are defined by a formula applied to the member's compensation and/or years of service.

**Defined Contribution Plan:** A retirement plan, such as a 401(k) plan, a 403(b) plan, or a 457 plan, in which the contributions to the plan are assigned to an account for each member, and the plan's earnings are allocated to each account, and each member's benefits are a direct function of the account balance.

**Employer Normal Cost:** The portion of the Normal Cost to be paid by the employers. This is equal to the Normal Cost less expected member contributions.

**Experience Study:** A periodic review and analysis of the actual experience of the Fund which may lead to a revision of one or more actuarial assumptions. Actual rates of decrement and salary increases are compared to the actuarially assumed values and modified as deemed appropriate by the Actuary.

**Funded Ratio:** The ratio of the actuarial value of assets (AVA) to the actuarial accrued liability (AAL). Plans sometimes calculate a market funded ratio, using the market value of assets (MVA), rather than the AVA, although GASB 25 reporting requires the use of the AVA.

**Funding Period or Amortization Period:** The term "Funding Period" is used two ways. In the first sense, it is the period used in calculating the Amortization Payment as a component of the ADC. This funding period is chosen by the Board of Trustees. In the second sense, it is a calculated item: the number of years in the future that will theoretically be required to amortize (i.e., pay off or eliminate) the Unfunded Actuarial Accrued Liability, based on the statutory employer contribution rate, and assuming no future actuarial gains or losses.

**GASB:** Governmental Accounting Standards Board.

**GASB 67** and **GASB 68:** Governmental Accounting Standards Board Statement Nos. 67 and No. 68. These are the governmental accounting standards that set the accounting and reporting rules for public retirement systems and the employers that sponsor, participate in, or contribute to them. Statement No. 67 sets the accounting rules for the financial reporting of the retirement systems, while Statement No. 68 sets the rules for the employers that sponsor, participate in, or contribute to public retirement systems.

**Normal Cost:** That portion of the Actuarial Present Value of pension plan benefits and expenses which is allocated to a valuation year by the Actuarial Cost Method. Any payment in respect of an Unfunded Actuarial Accrued Liability is not part of Normal Cost (see Amortization Payment). For pension plan benefits which are provided in part by employee contributions, Normal Cost refers to the total of employee contributions and employer Normal Cost unless otherwise specifically stated. Under the entry age normal cost method, the Normal Cost is intended to be the level cost (when expressed as a percentage of pay) needed to fund the benefits of a member from hire until ultimate termination, death, disability or retirement.

**Open Amortization Period:** An open amortization period is one which is used to determine the Amortization Payment but may not decrease by exactly one year in the subsequent year's actuarial valuation. In some instances, if the initial period is set as 30 years, the same 30-year period is used in determining the Amortization Period each year. In other instances, the amortization period may "float" from year to year, meaning it could increase, decrease, or remain relatively unchanged from the amortization period in the prior year's valuation.

**Unfunded Actuarial Accrued Liability:** The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets. This value may be negative in which case it may be expressed as a negative Unfunded Actuarial Accrued Liability, also called the Funding Surplus.

**Valuation Date or Actuarial Valuation Date:** The date as of which the value of assets is determined and as of which the Actuarial Present Value of Future Plan Benefits is determined. The expected benefits to be paid in the future are discounted to this date.
